

Module 01

Windows Server 2025 Installation

1. Introduction to Windows Server 2025

- 1.1. Client/Server Networking
- 1.2. Network Operating System
- 1.3. The purpose of Windows Server

2. Windows Server 2025 Installation

- 2.1. Requirements
- 2.2. Installation

3. Edit Some Policies

- 3.1. Disable Shutdown Event Tracker
- 3.2. Do not require CTRL+ALT+DEL
- 3.3. Shutdown Without Logging In

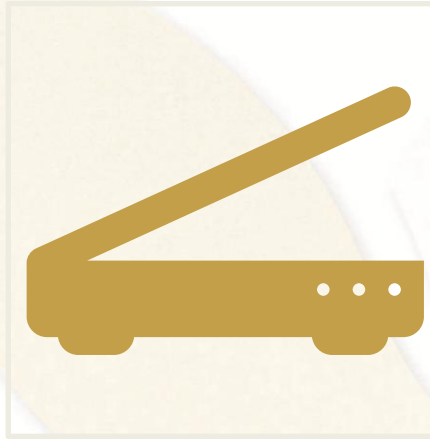

1. Introduction to Windows Server 2025

1.1. Client/Server Networking

Client / Server Networking is a type of network in which the server manages resources and provides services to clients/users, as well as providing security to the entire network.

Resources are available in the network such as: Data, Hard Disk Drive, Printer, DVD Drive, Scanner, Computer, Peripherals and some other devices.

In addition, it provides many services for use such as Active Directory, WINS, DNS Server, DHCP Server, Web Server, Database Server, etc.

1.1. Client/Server Networking (Cont.)

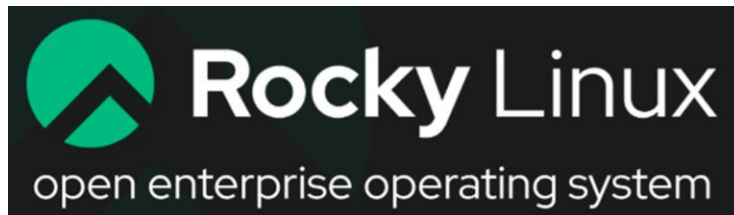

1.2. Network Operating System

- A network operating system (NOS) is an operating system that manages network resources: essentially, an operating system that includes special functions for connecting computers and devices into a local area network (LAN). The NOS manages multiple requests (inputs) concurrently and provides the security necessary in a multiuser environment.

Windows Server 2025

1.3. The purpose of Windows Server

- From where is this data being pushed and pulled? What enables the mechanisms and applications running on the client operating systems to interface with this data? What secures these users and their data? The answers to these questions reveal the purpose of servers in general. They house, protect, and serve up data to be consumed by clients.
- Everything revolves around data in business today. Our email, documents, databases, customer lists—everything that we need to do business well is data. That data is critical to us. Servers are what we use to build the fabric upon which we trust our data to reside.

1.3. The purpose of Windows Server (Cont.)

- We traditionally think about servers using a client-server interface mentality. A user opens a program on their client computer, this program reaches out to a server in order to retrieve something, and the server responds as needed. This idea can be correctly applied to just about every transaction you may have with a server. When your domain-joined computer needs to authenticate you as a user, it reaches out to Active Directory on the server to validate your credentials and get an authentication token. When you need to contact a resource by name, your computer asks a DNS server how to get there. If you need to open a file, you ask the file server to send it your way.

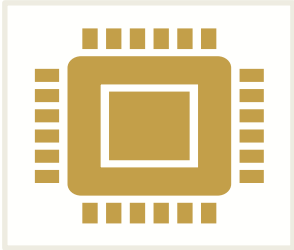

1.3. The purpose of Windows Server (Cont.)

- Windows Server contains an incredible amount of technology, all wrapped up in one small Installation disk. With Windows Server 2025, Microsoft has got us thinking out of the box about what it means to be a server in the first place and comes with some exciting new capabilities that we will spend some time covering in these pages. Things such as PowerShell, Windows Admin Center, software-defined storage, and software-defined networking are changing the way that we manage and size our computing environments; these are exciting times to be or to become a server administrator!

2. Windows Server 2025 Installation

2.1. Requirements

Hardware

CPU: 64-bit processor (2 cores or more recommended) RAM: Server Core: **2 GB minimum (4 GB recommended)**

Desktop Experience: **4 GB minimum (8 GB recommended)**

Storage: Minimum: **32 GB**

Recommended: **100 GB or more**

Firmware: **UEFI with Secure Boot (recommended)** TPM 2.0: Recommended for security features

Software

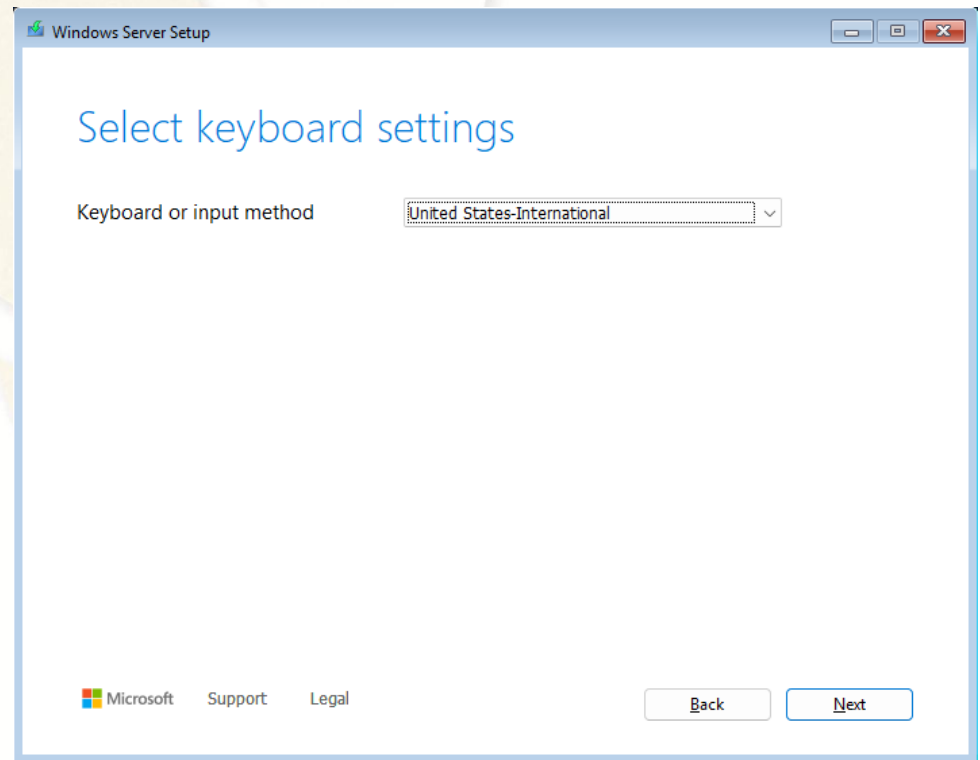

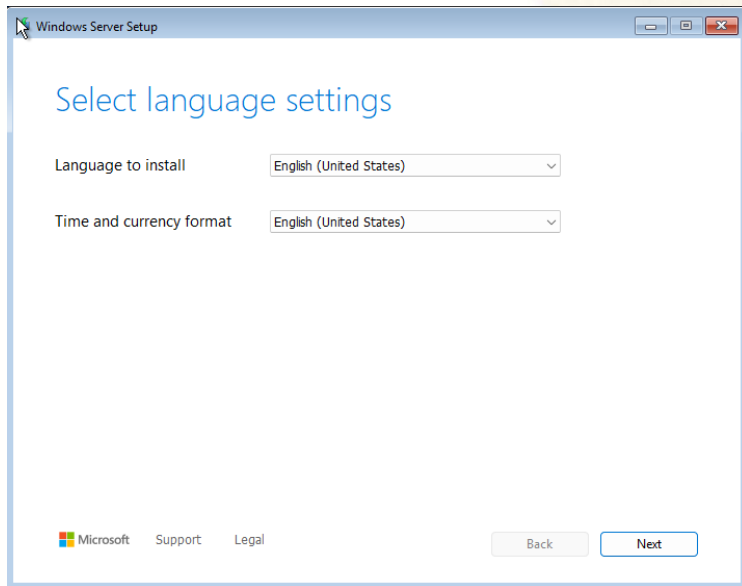

Windows Server 2025 Operating System
DVD or

Windows Server 2025 Operating System ISO
File

Applications to create bootable USB stick
such as UltraISO, Rufus, Ventoy, etc.

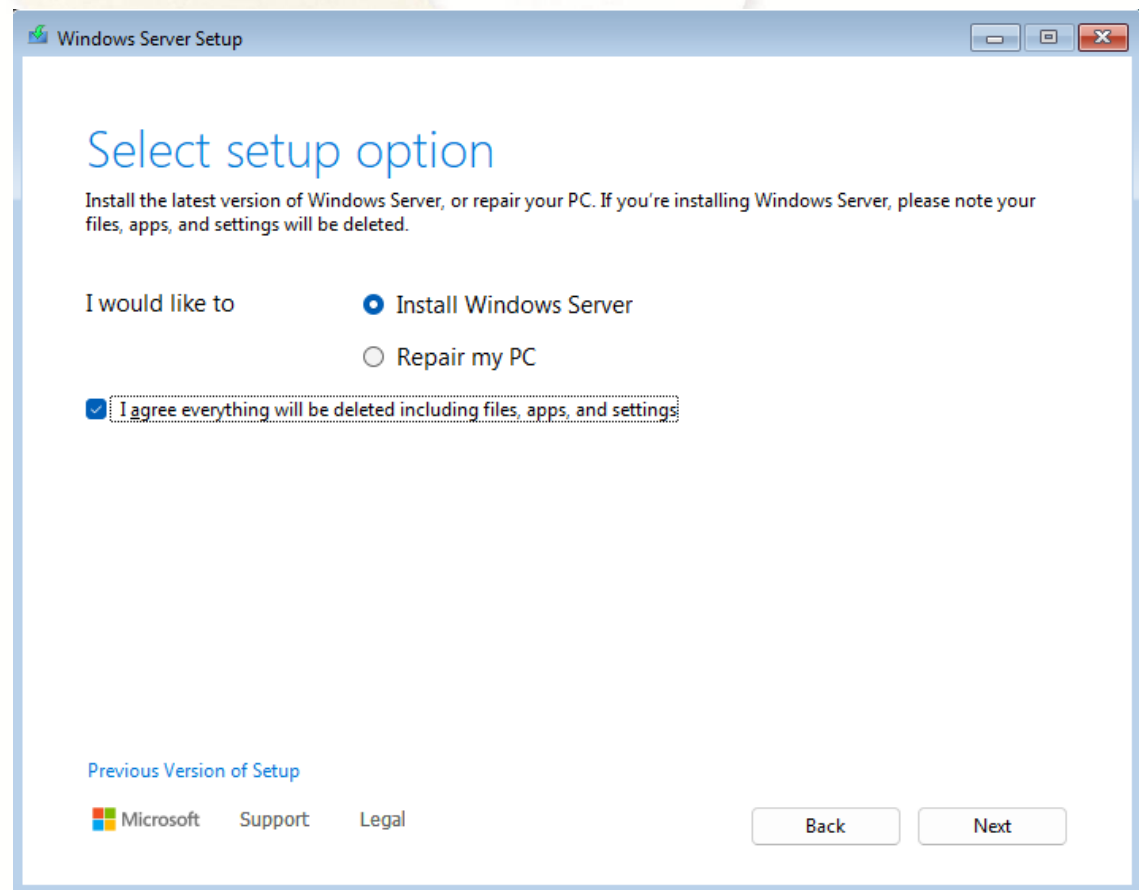

2.2. Installation

- Step 1: On **Select language settings** click **Next** >
Select **United States-International** > Click **Next**

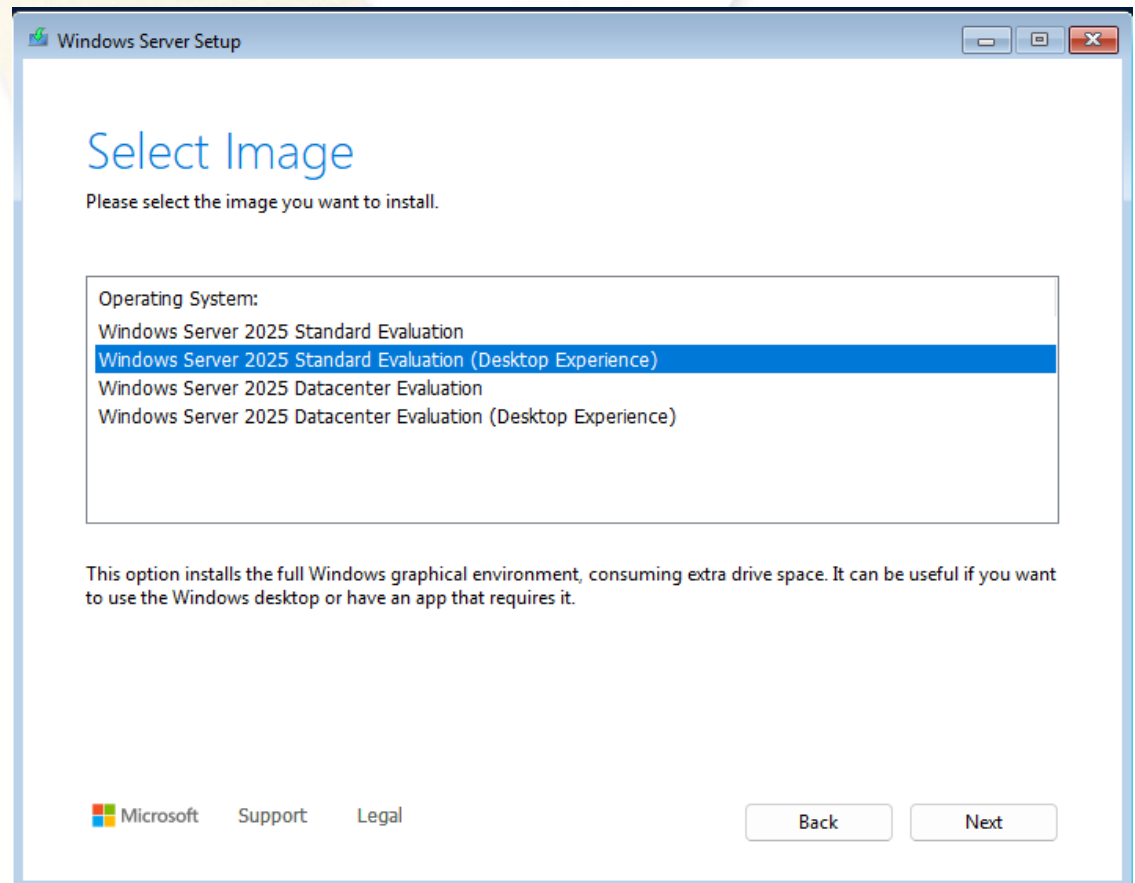

2.2. Installation (cont.)

- Step 2: Select **I agree everything will be deleted including files, apps, and settings** > Click **Next**

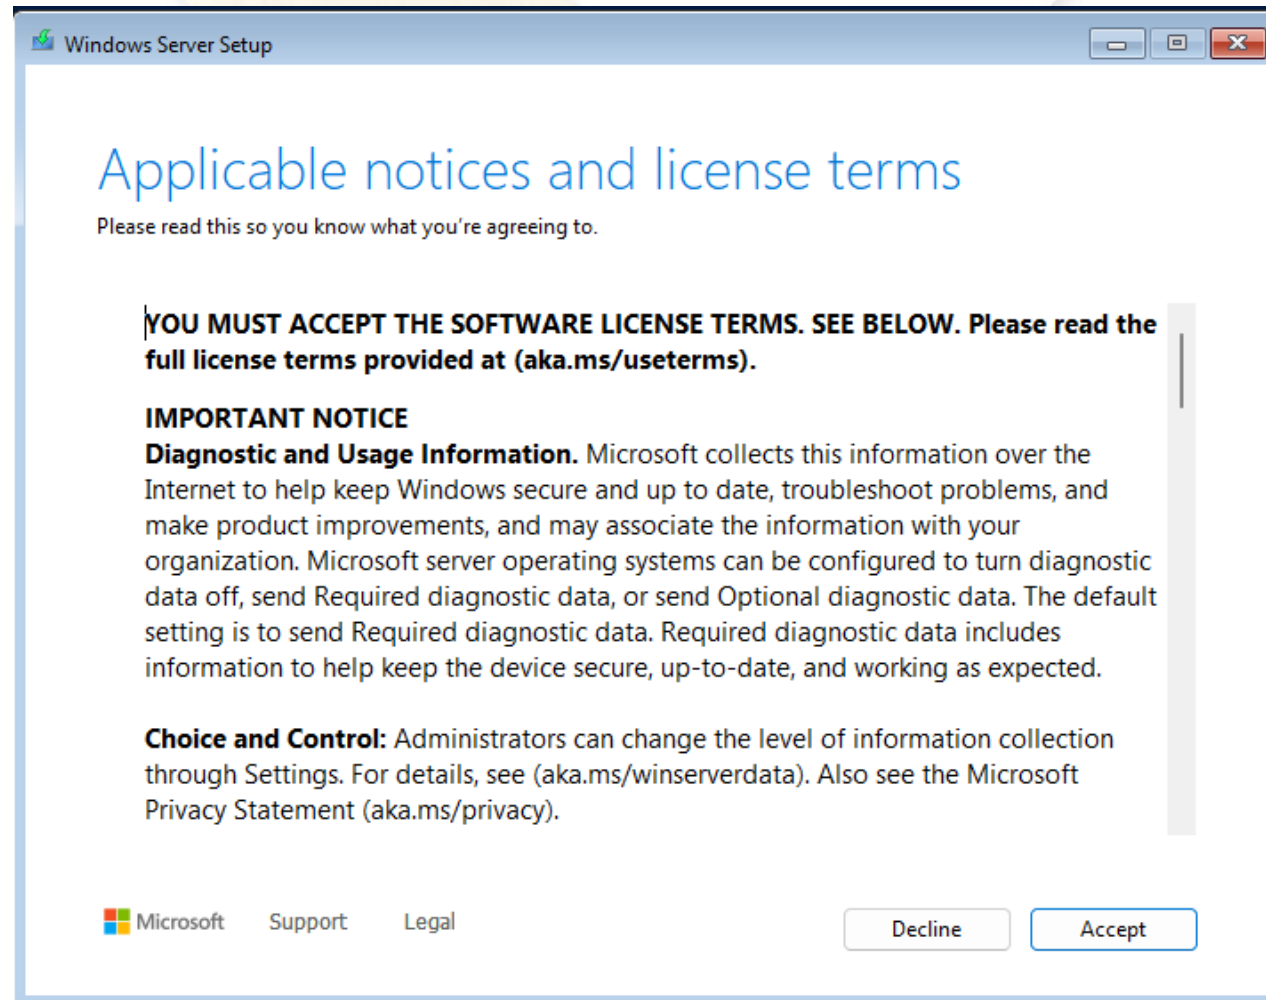

2.2. Installation (cont.)

- Step 3: Select on **Windows Server 2025 Standard Evaluation (Desktop Experience)** > Click **Next**

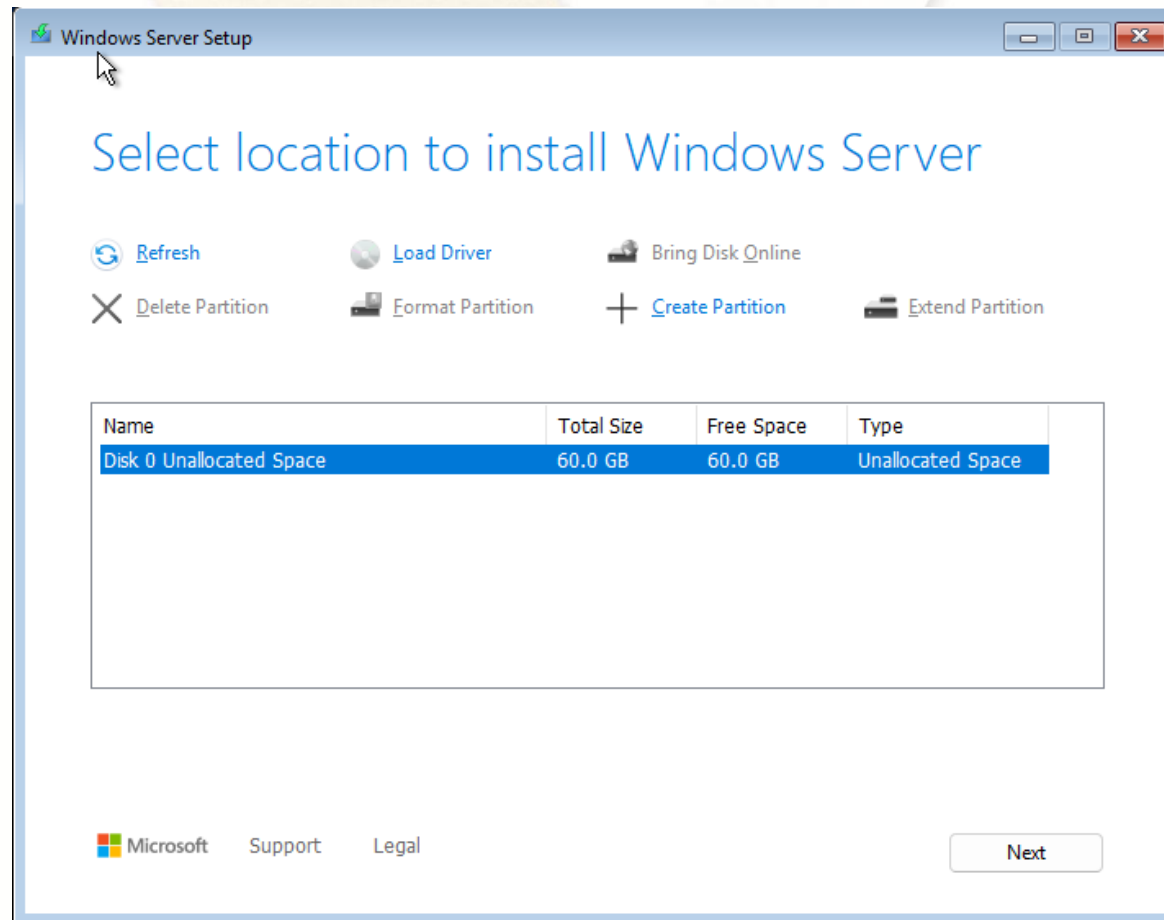

2.2. Installation (cont.)

- Step 4: Click **Accept**

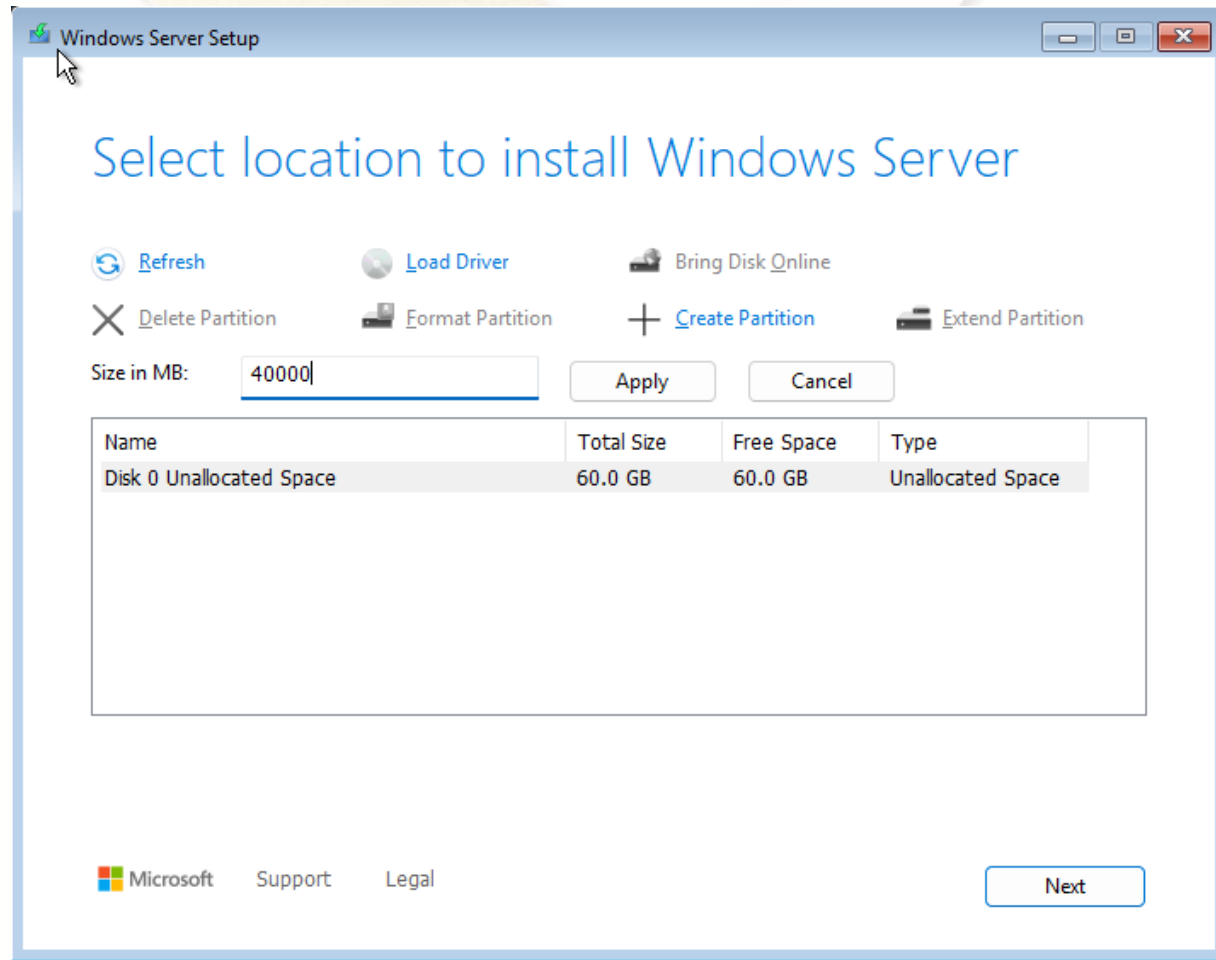

2.2. Installation (cont.)

- Step 5: Click on **Disk 0 Unallocated Space** > click **Create Partition**

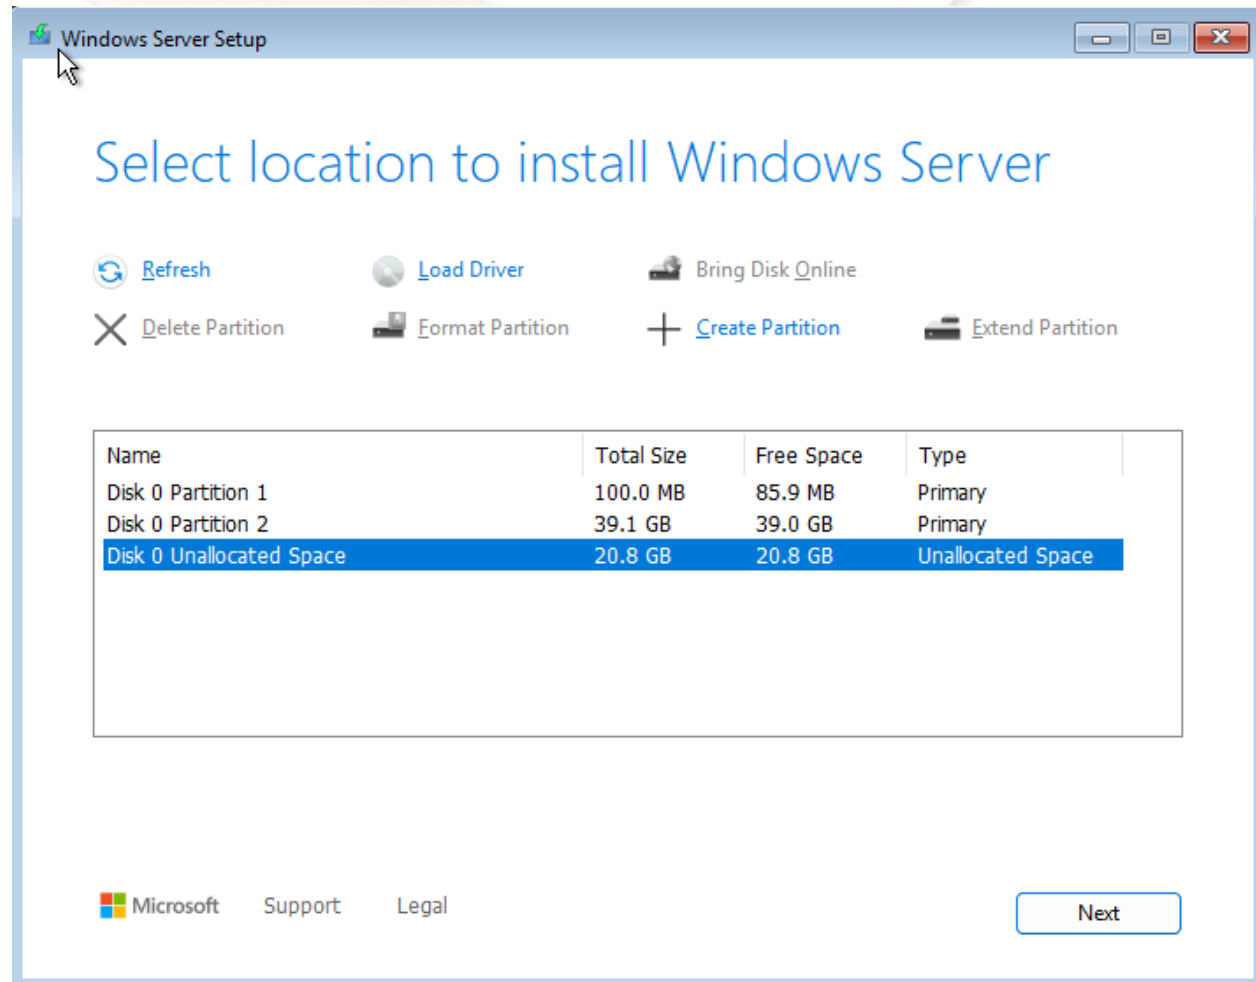

2.2. Installation (cont.)

- Step 6: Enter **40000** (Partition Space in MB) in **Size** text field
> Click **Apply** button

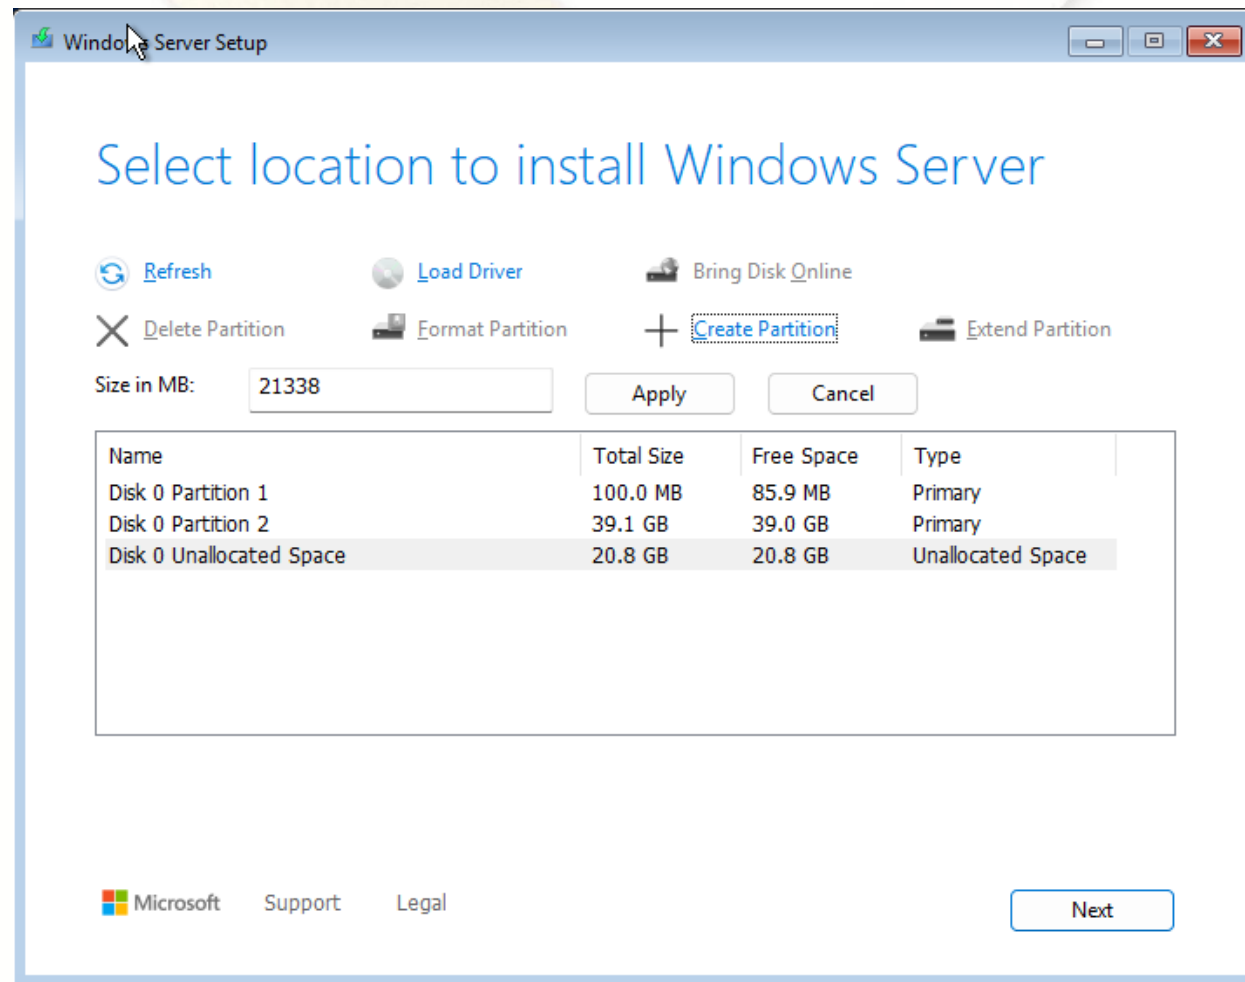

2.2. Installation (cont.)

- Step 7: Select Disk 0 **Unallocated Space** > Click **Create Partition**

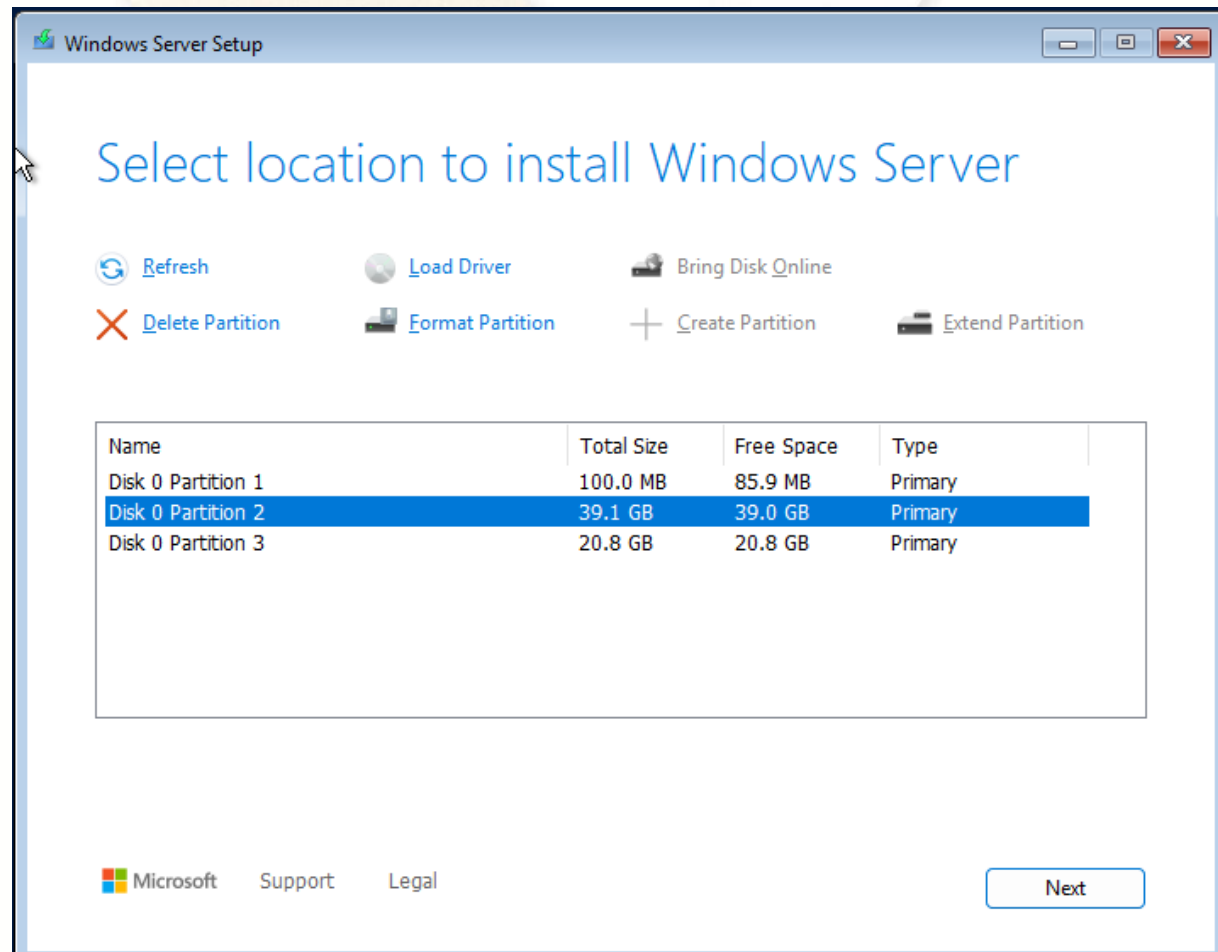

2.2. Installation (cont.)

- Step 8: Click **Apply** button

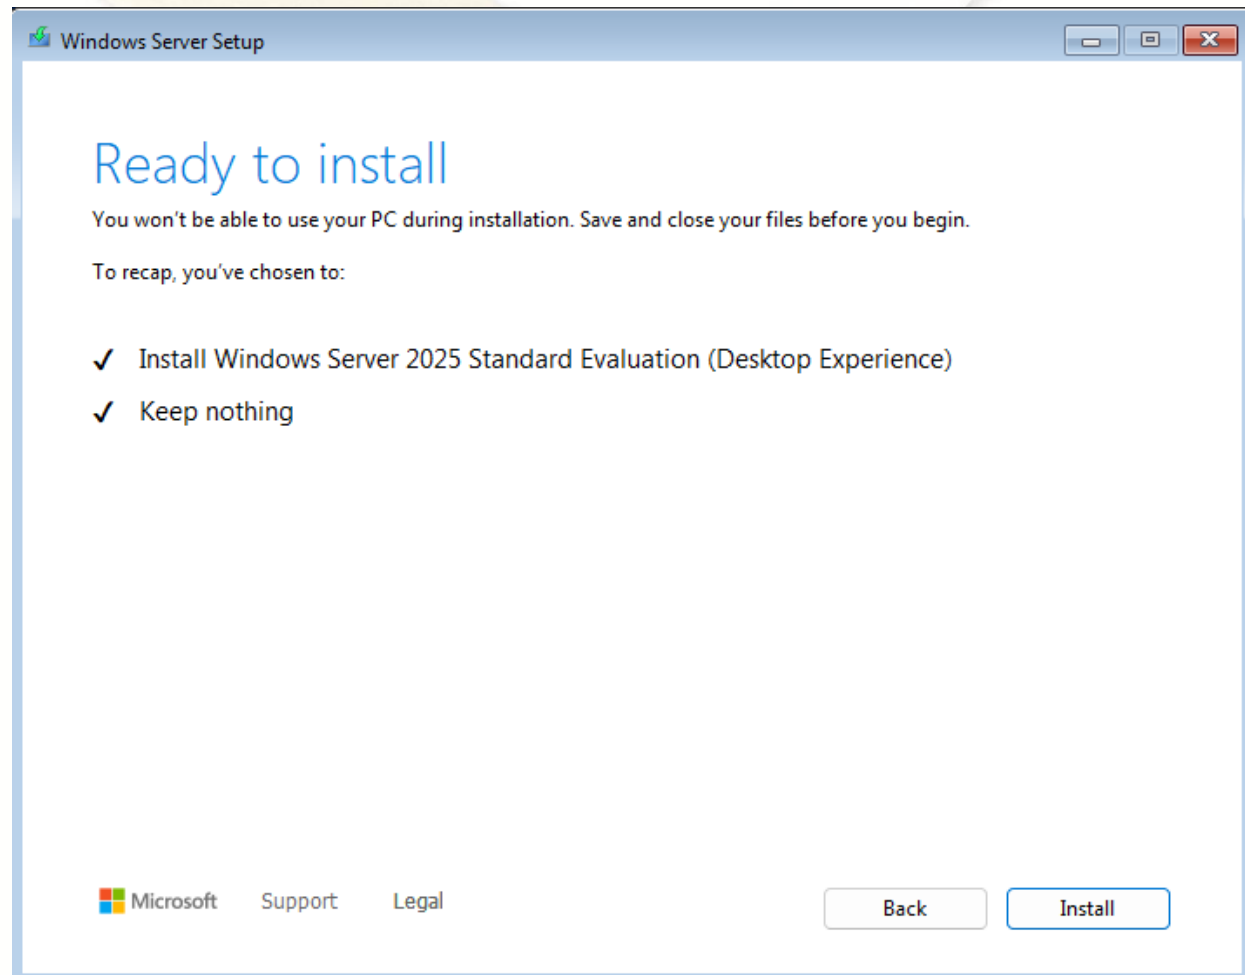

2.2. Installation (cont.)

- Step 9: Select a Partition to store Operating System (**Disk 0 Partition 2**) > Click **Next**

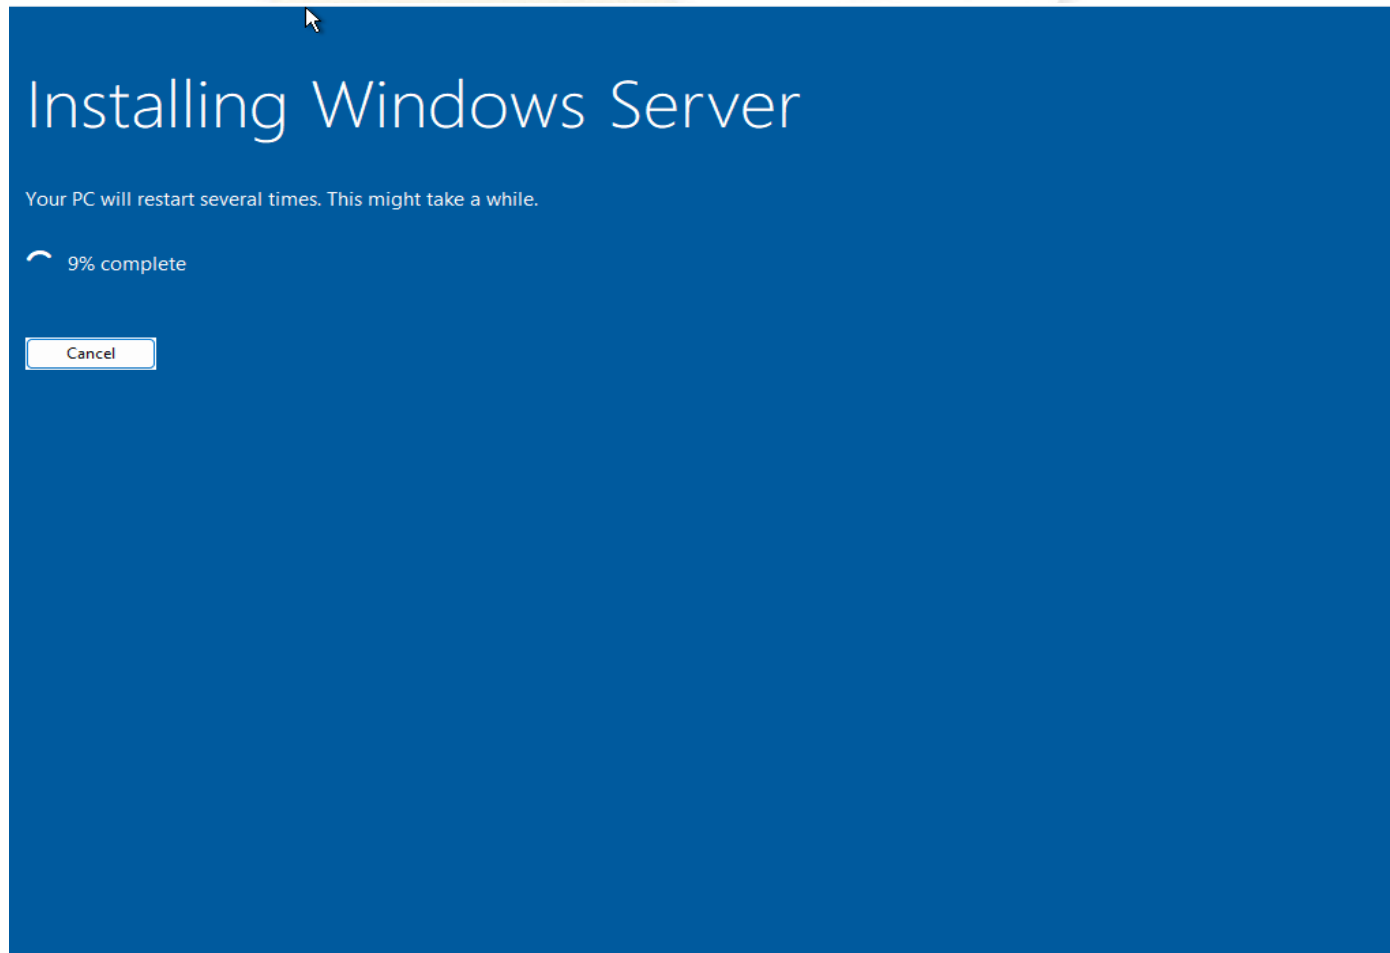

2.2. Installation (cont.)

- Step 10: Verify on Ready to **install** if its OK > Click Install

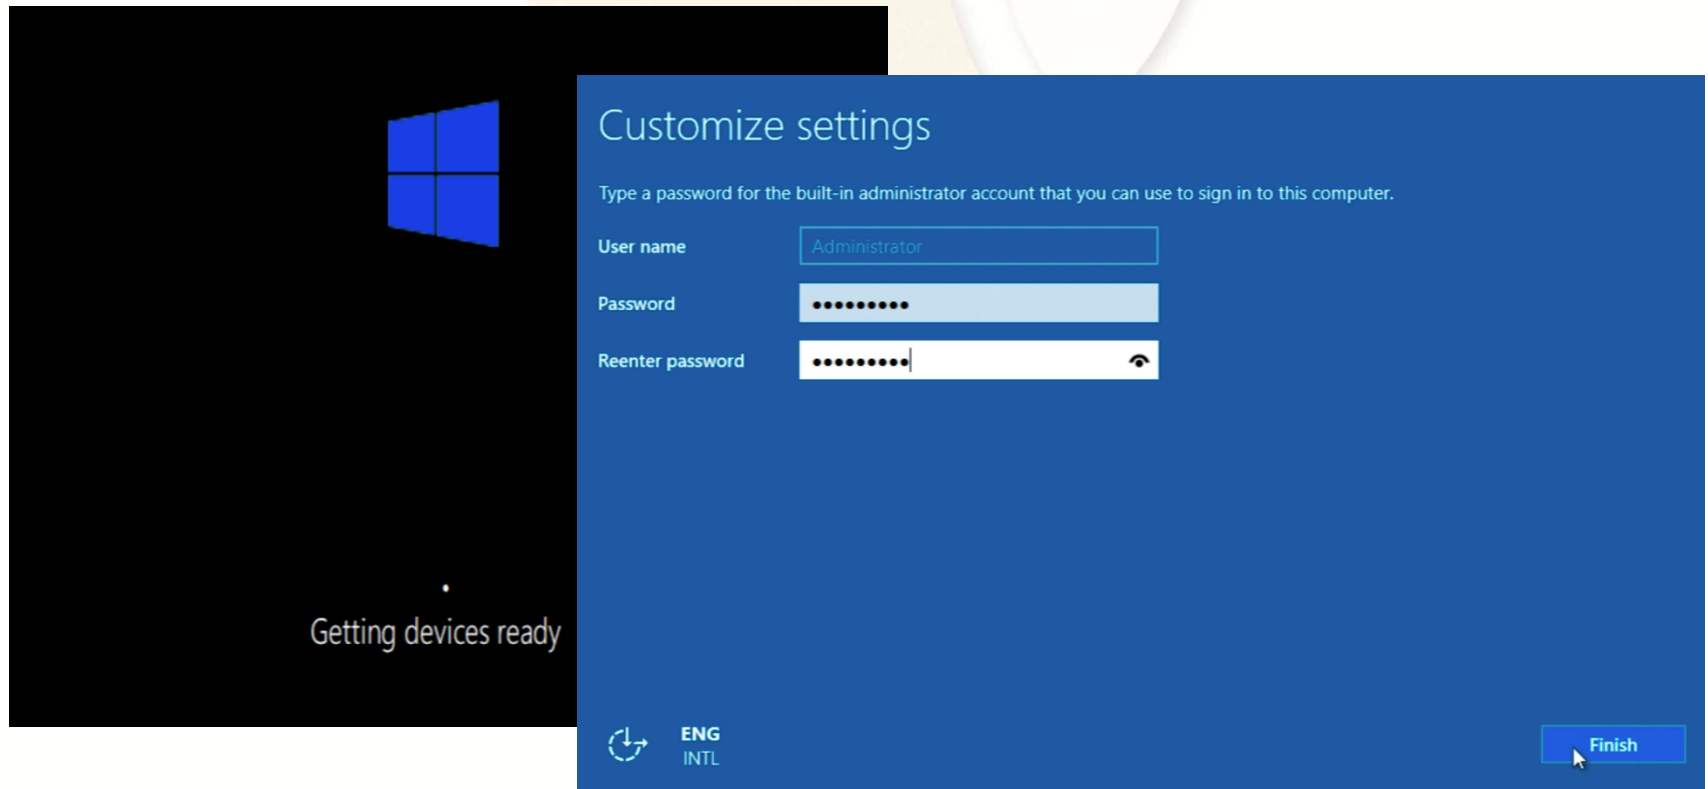

2.2. Installation (cont.)

- Step 11: Windows will take some time to install until Windows needs to restart by itself

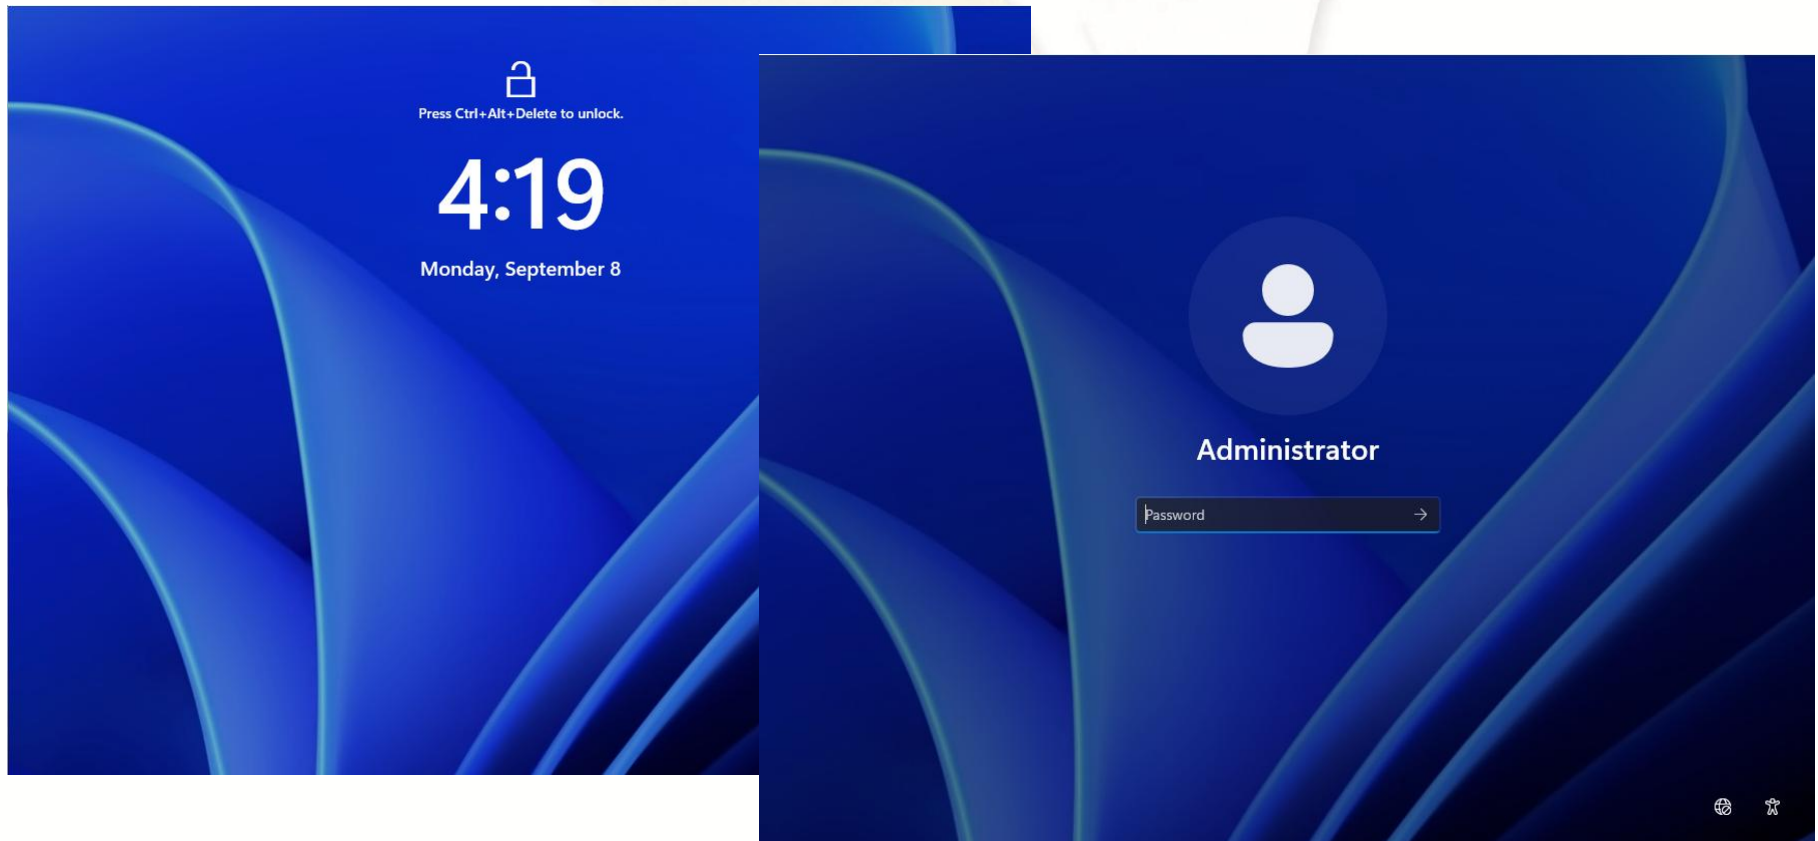

2.2. Installation (cont.)

- Step 12: It will be restarted several times until Customize settings has been appeared > Enter **administrator Password** > Enter **Password** again in **Reenter password** text field > Click **Finish**

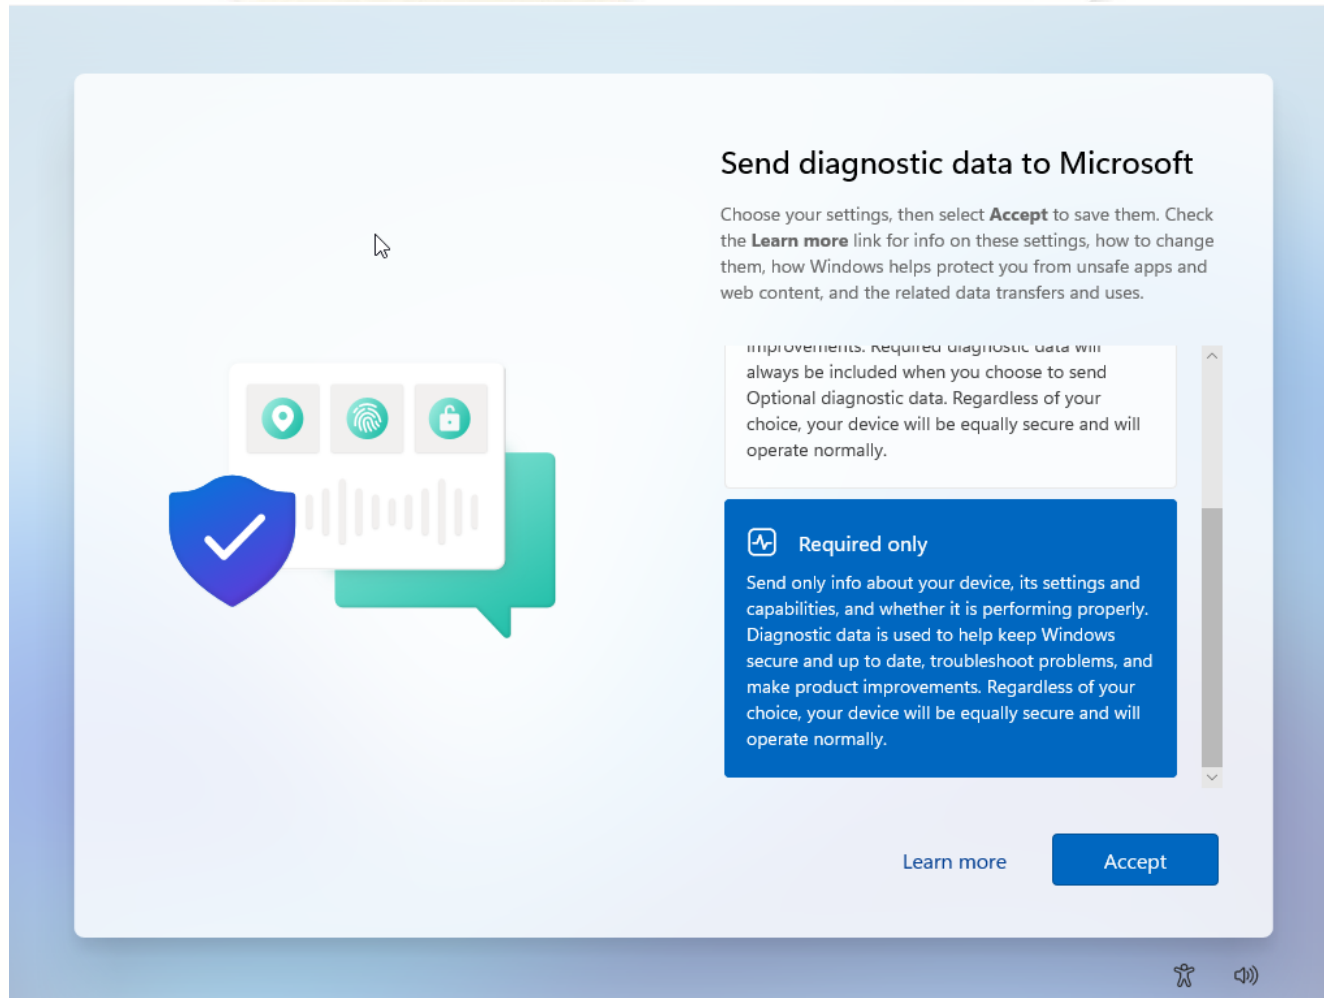

2.2. Installation (cont.)

- Step 13: Press **Ctrl + Alt + Del** > Enter administrator Password > Click Submit or Press Enter Key

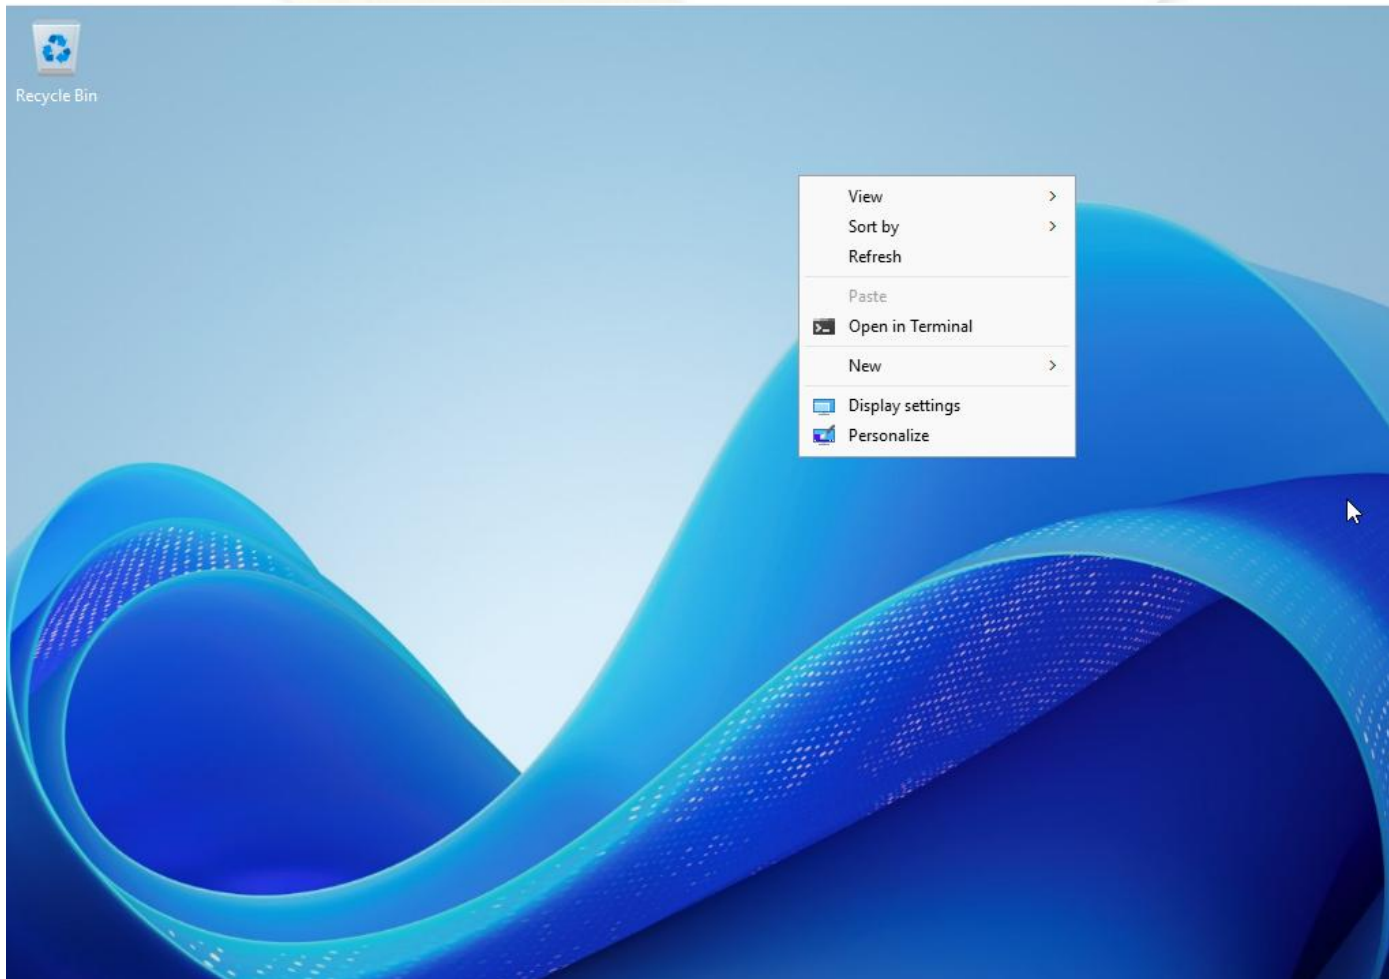

2.2. Installation (cont.)

- Step 14: Choose on **Required only** > Click **Accept**

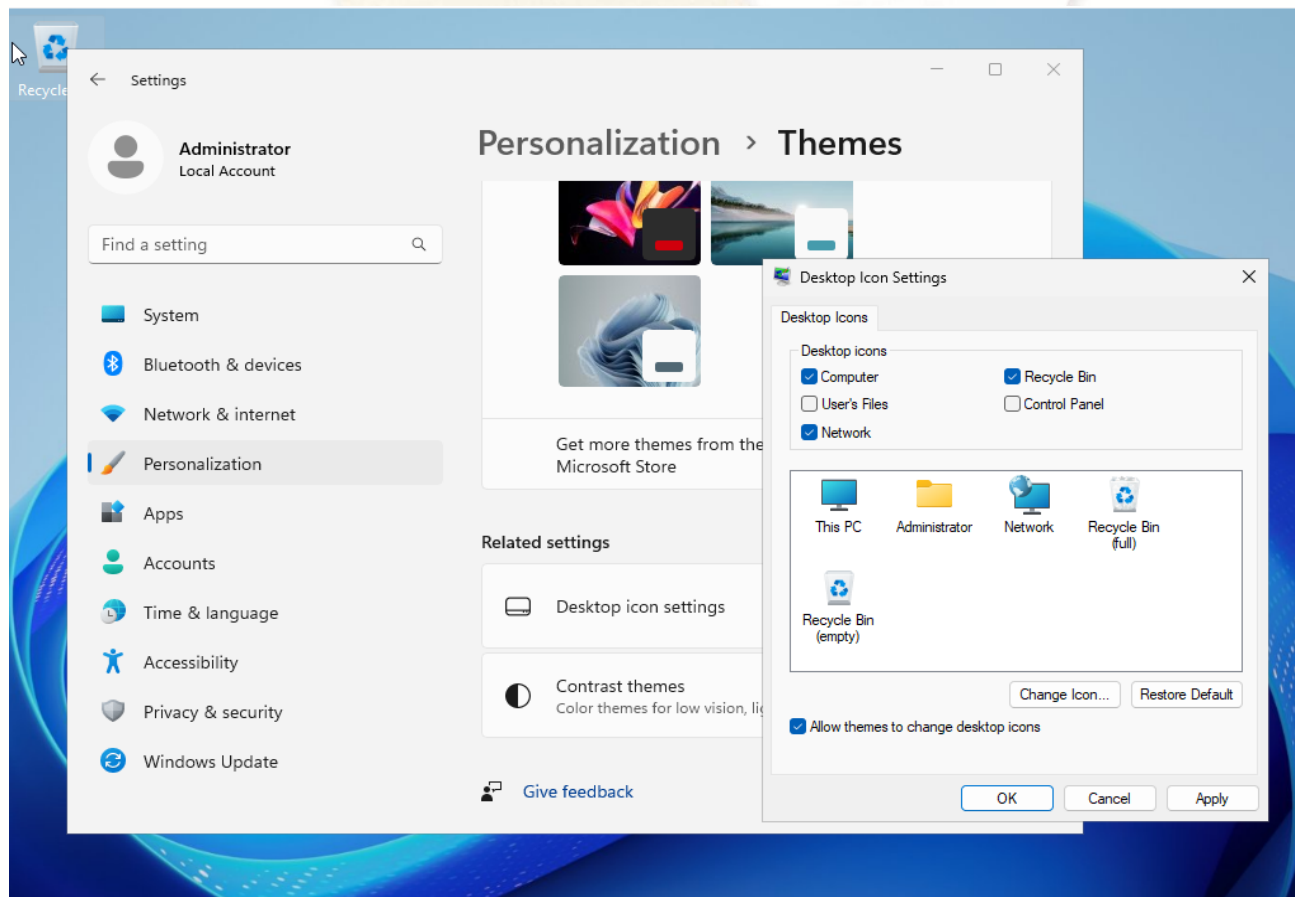

2.2. Installation (cont.)

- Step 15: Right click on Desktop > Choose **Personalize**

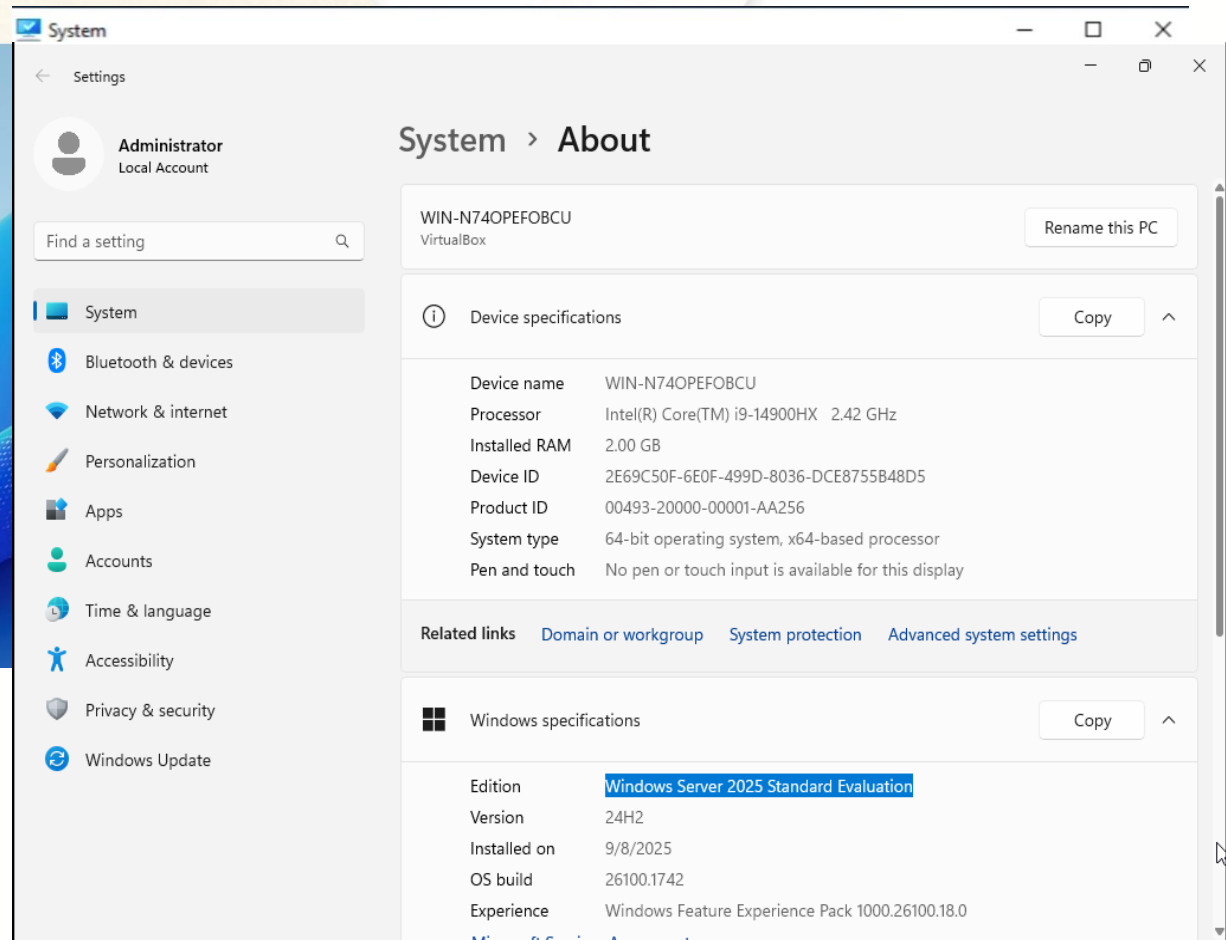

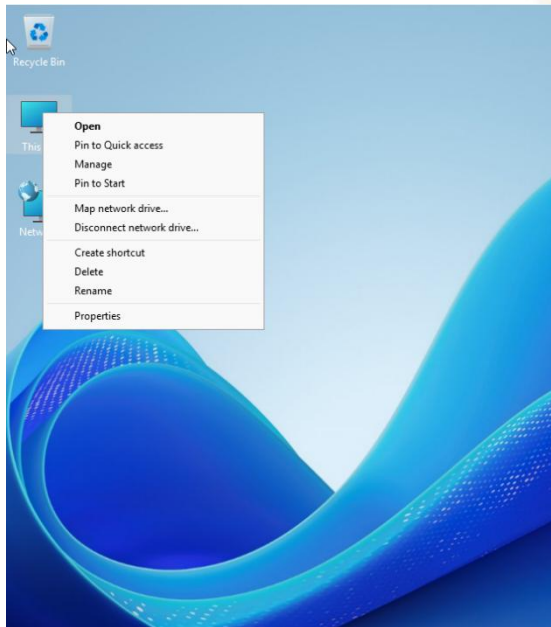

2.2. Installation (cont.)

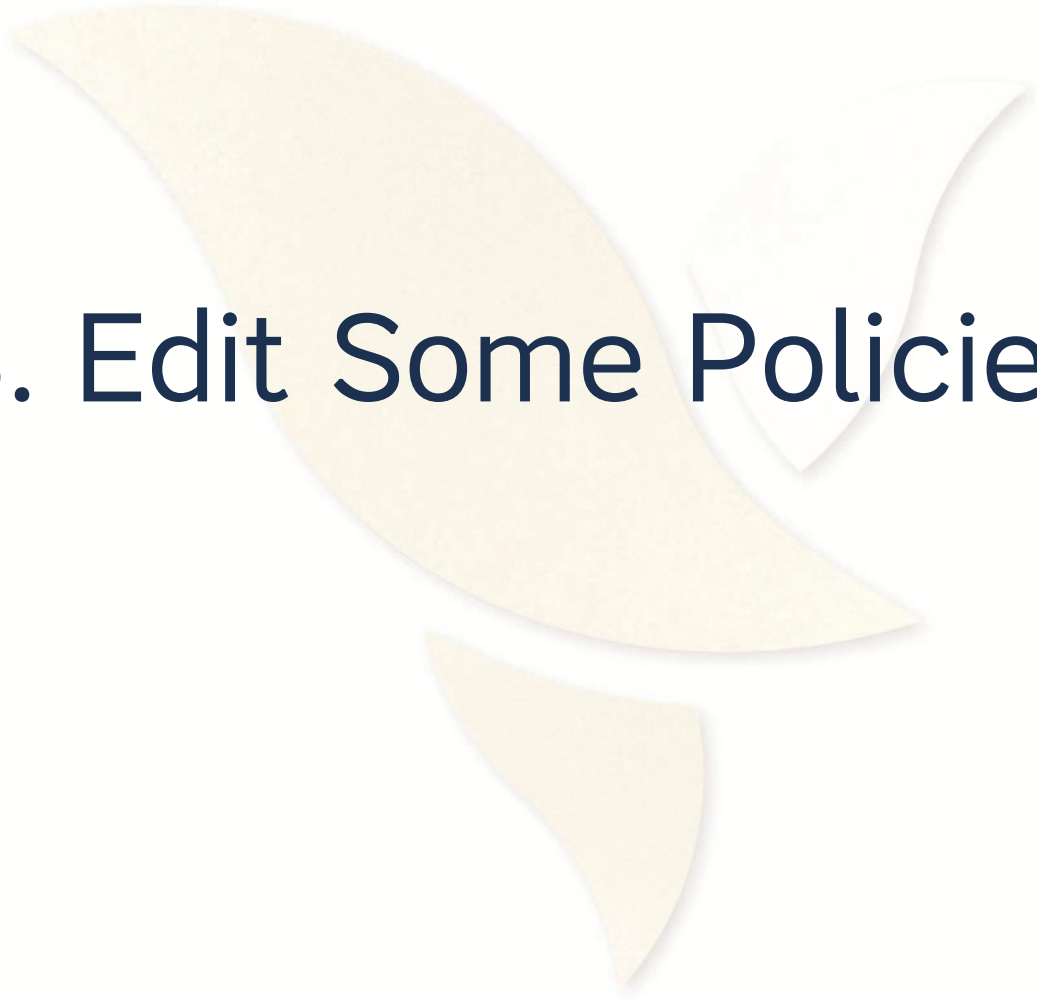

- Step 16: On the left sidebar click **Themes** > Under **Related Settings** click **Desktop icon settings** > Check **Computer and Network** > Click **OK**

2.2. Installation (cont.)

- Step 16: Right click on **This PC** (Computer) > Choose **Property** > Under Windows specifications you will see **Windows Server 2025**

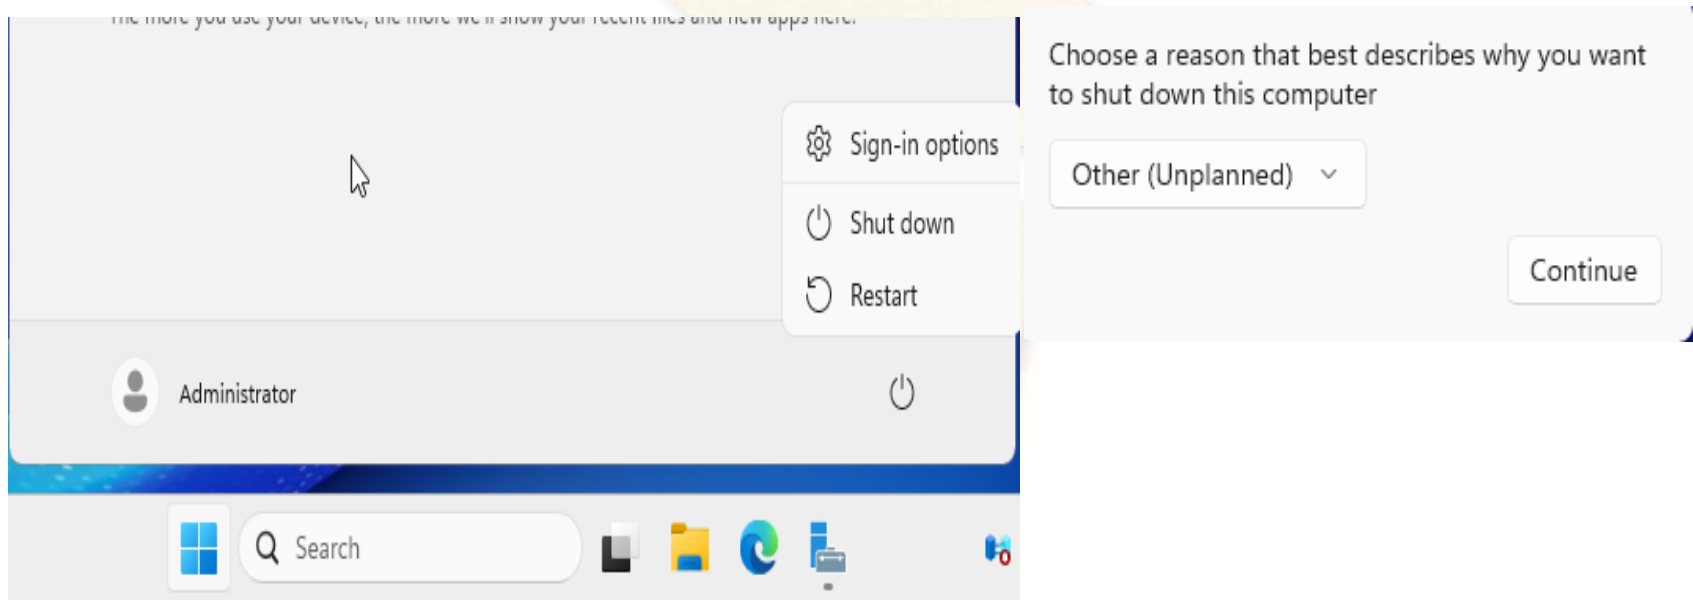

3. Edit Some Policies

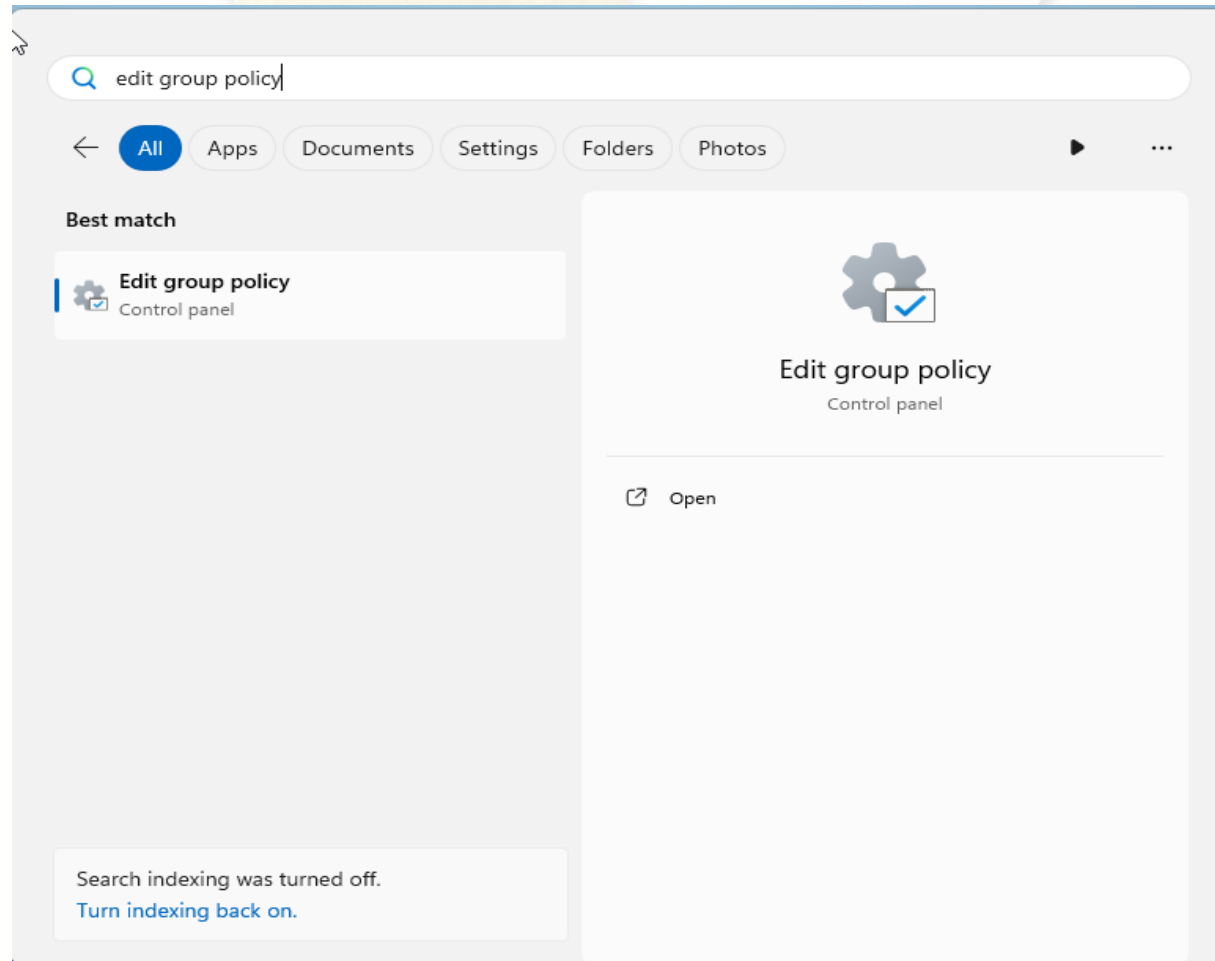

3.1. Disable Shutdown Event Tracker

- By default setting, when you shutdown or restart your server, Windows Server will ask you to choose a reason that best describes why you want to shutdown this computer.
- Sometimes, you need to disable this policy to make you practice fast. This is not recommended for security.

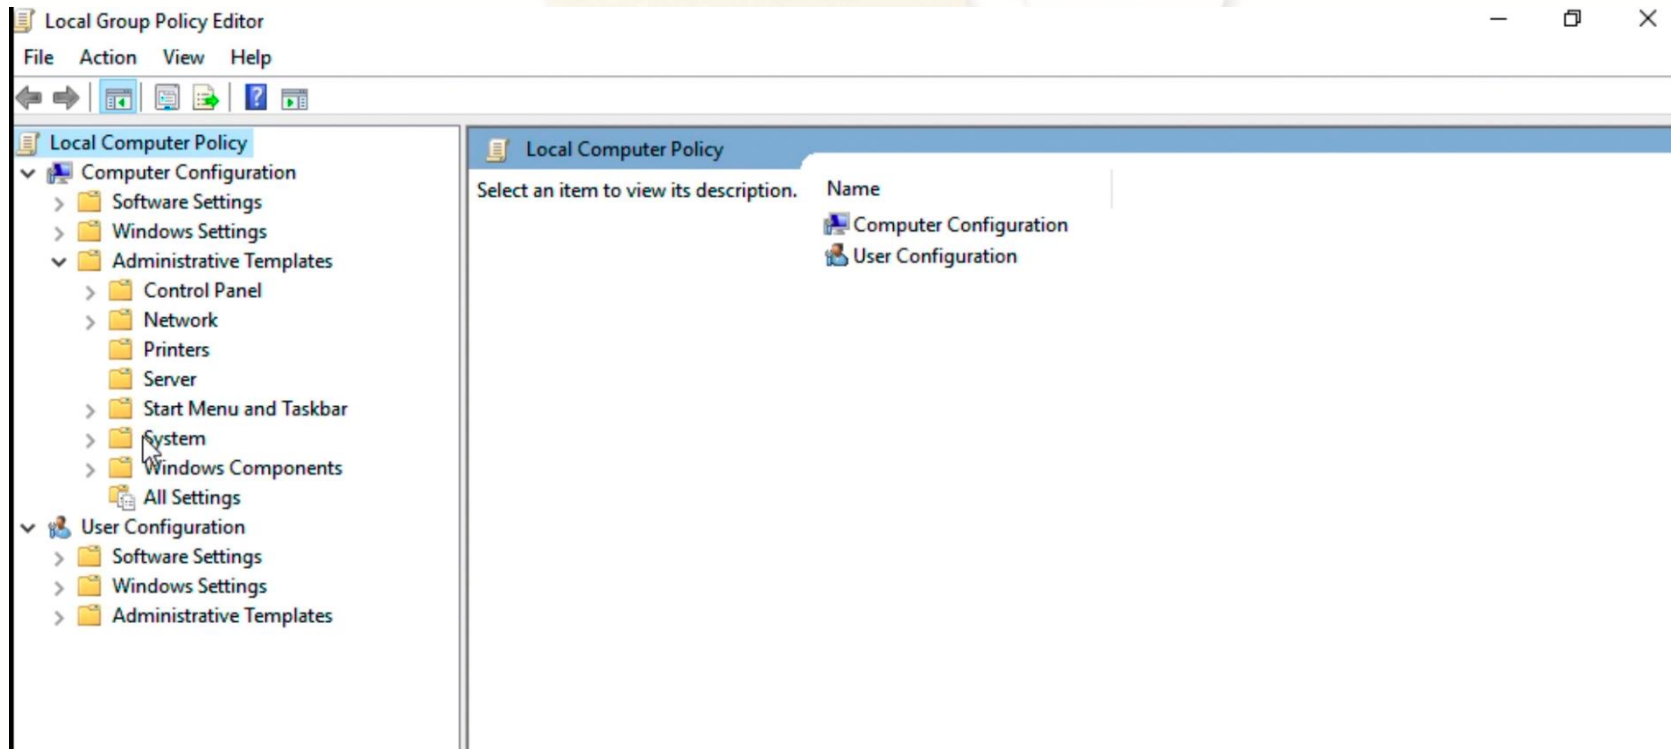

3.1. Disable Shutdown Event Tracker (Cont.)

- Step 1: Click **Start** button > type **Edit group policy** > Click **Edit group policy**

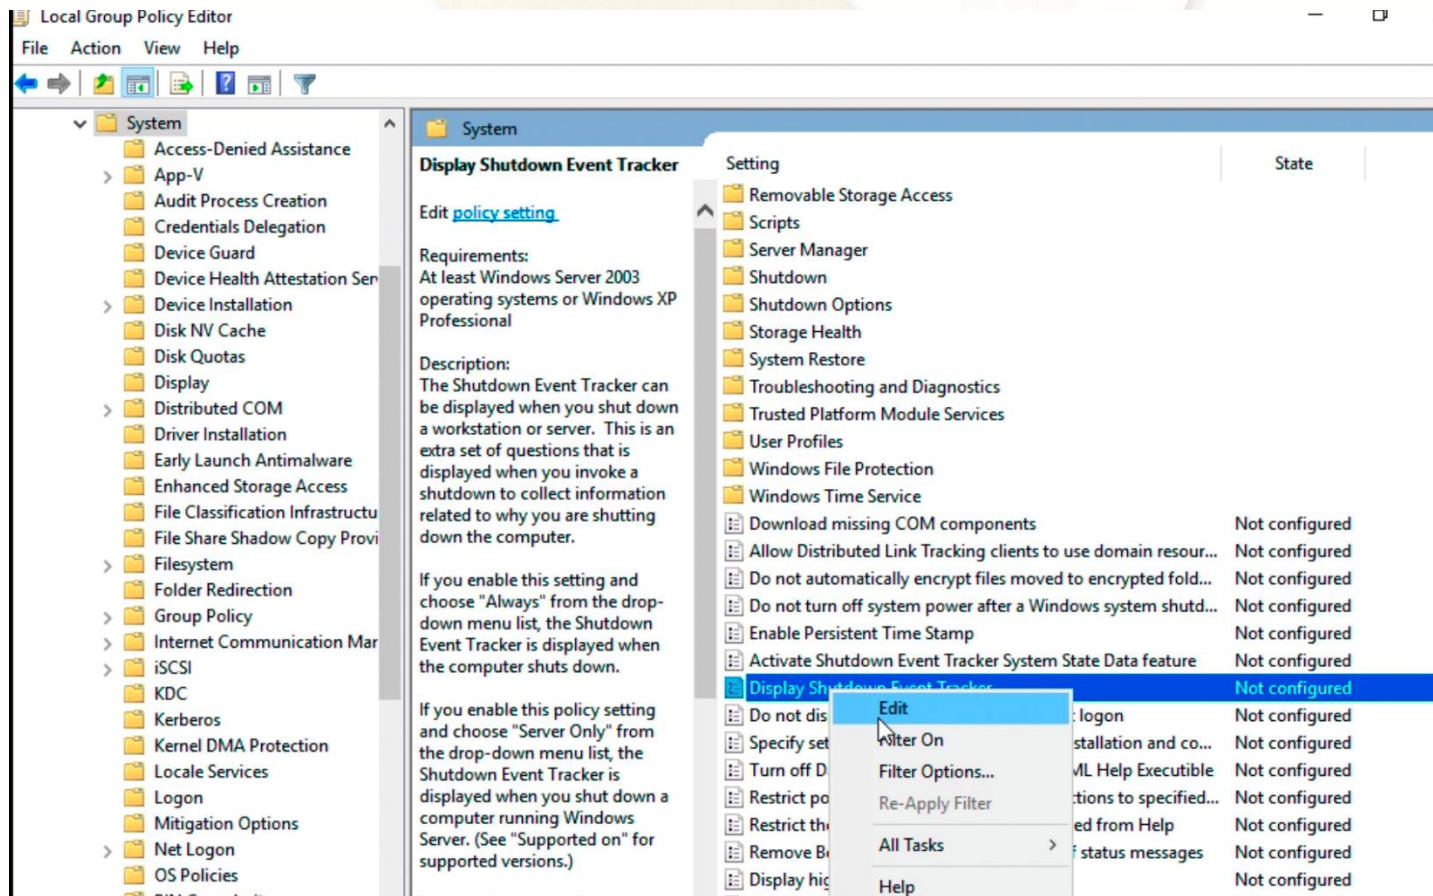

3.1. Disable Shutdown Event Tracker (Cont.)

- Step 2: Go to Computer Configuration > Administrative Template > System

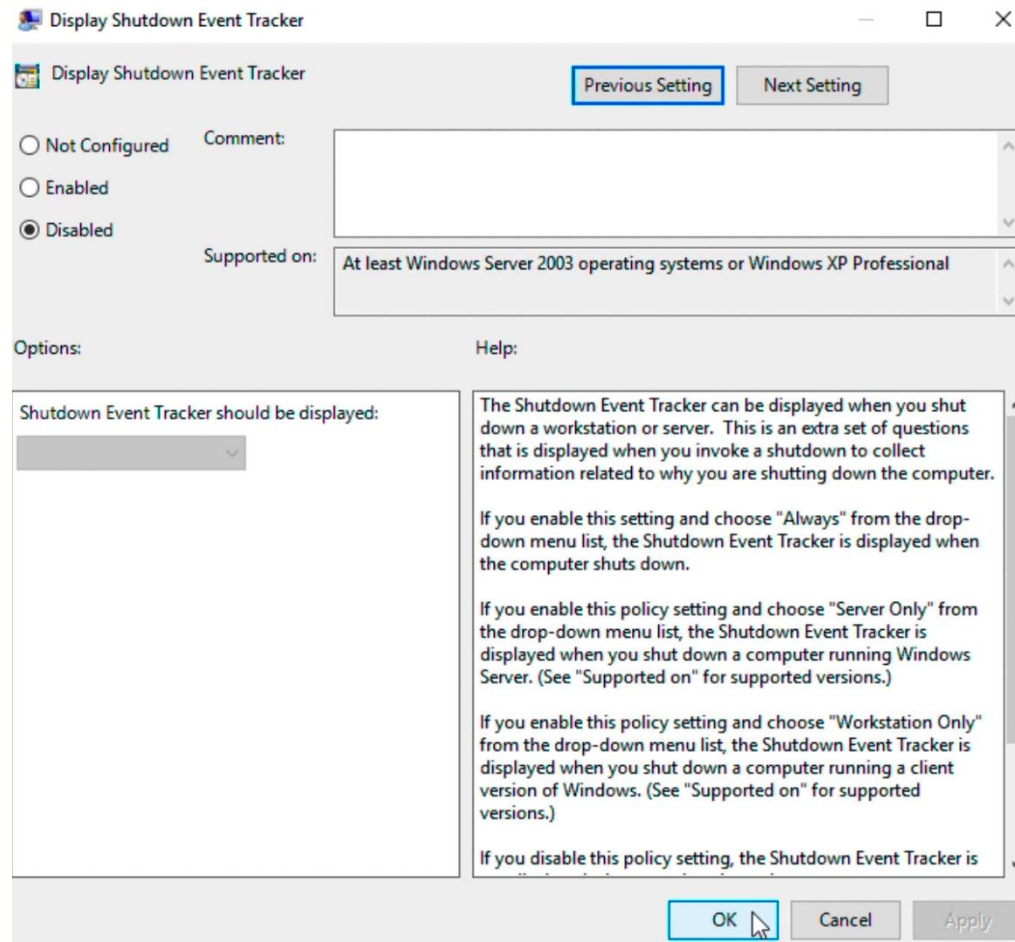

3.1. Disable Shutdown Event Tracker (Cont.)

- Step 3: Right click on Display Shutdown Event Tracker > Choose Edit

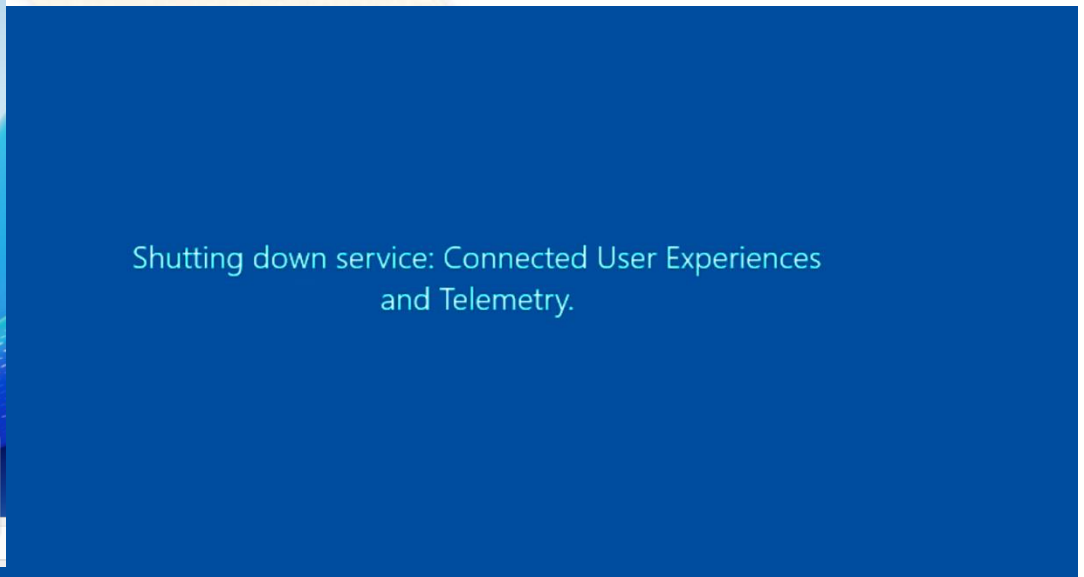

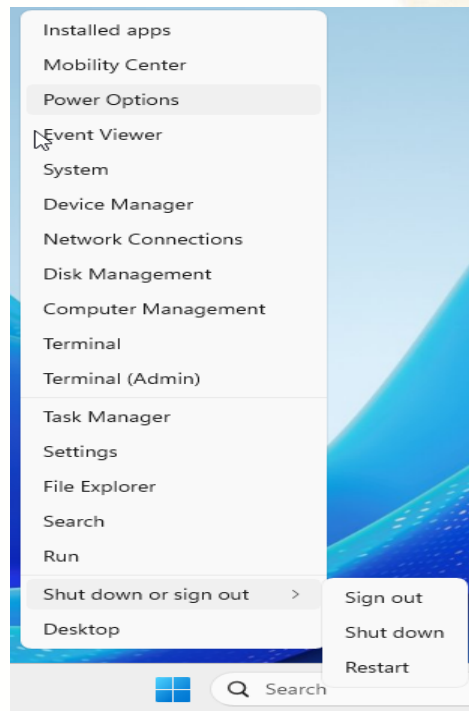

3.1. Disable Shutdown Event Tracker (Cont.)

- Step 4: **Disabled** > Click **OK**

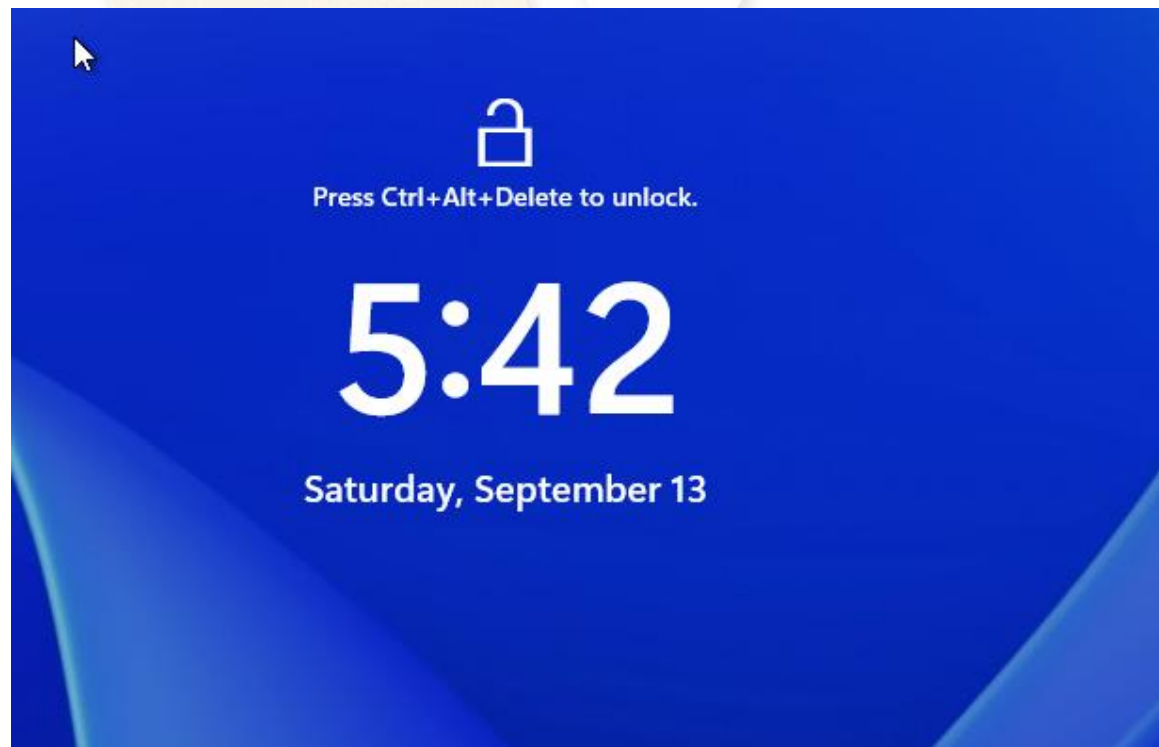

3.1. Disable Shutdown Event Tracker (Cont.)

- Step 5: Right click on **Start** button > Choose **Shutdown or sign out** > Choose **Restart**
- You will see your computer restart without ask any reason.

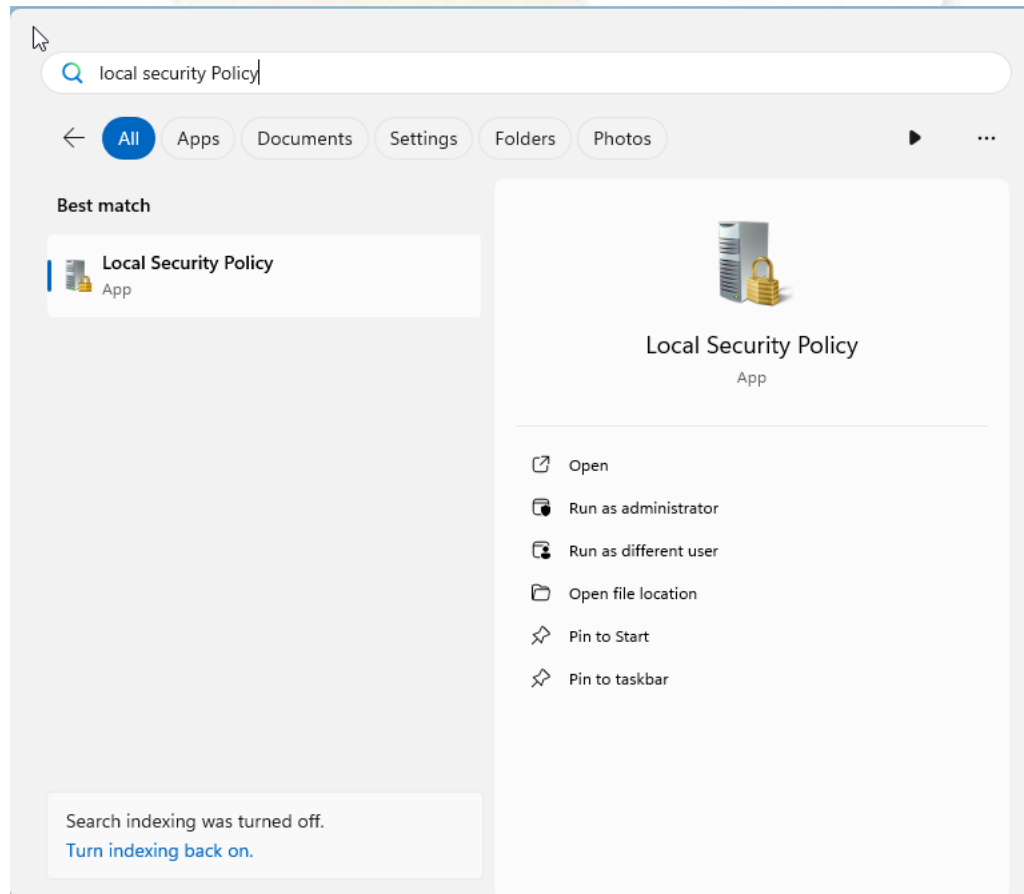

3.2. Do not require CTRL+ALT+DEL

- By default setting, before you enter login to Computer you must press **CTRL + ALT + DEL** keys on your keyboard
- Sometimes you need to disable this policy to make you practice fast. This is not recommended for security.

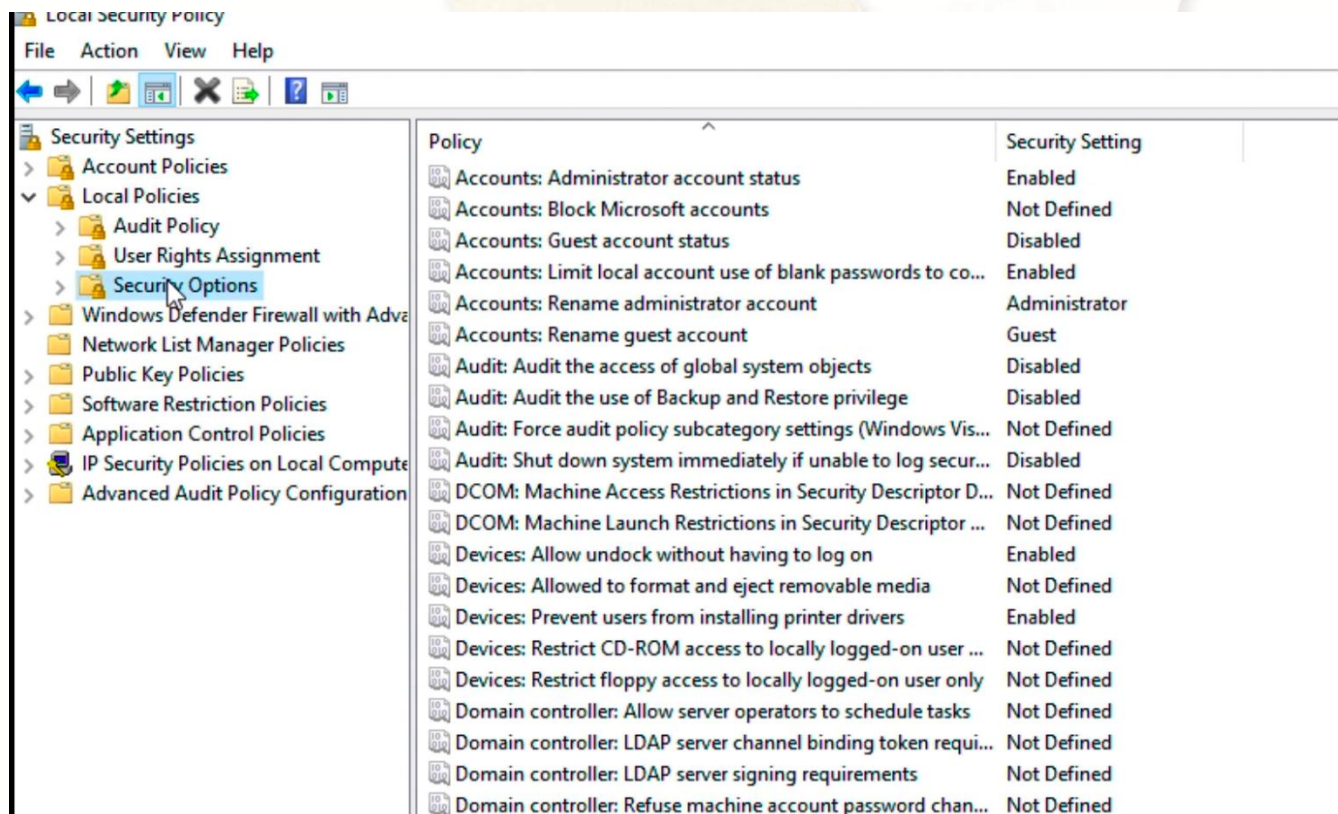

3.2. Do not require CTRL+ALT+DEL (Cont.)

- Step 1: Click **Start** button > type **Local Security Policy** > Click **Local Security Policy**

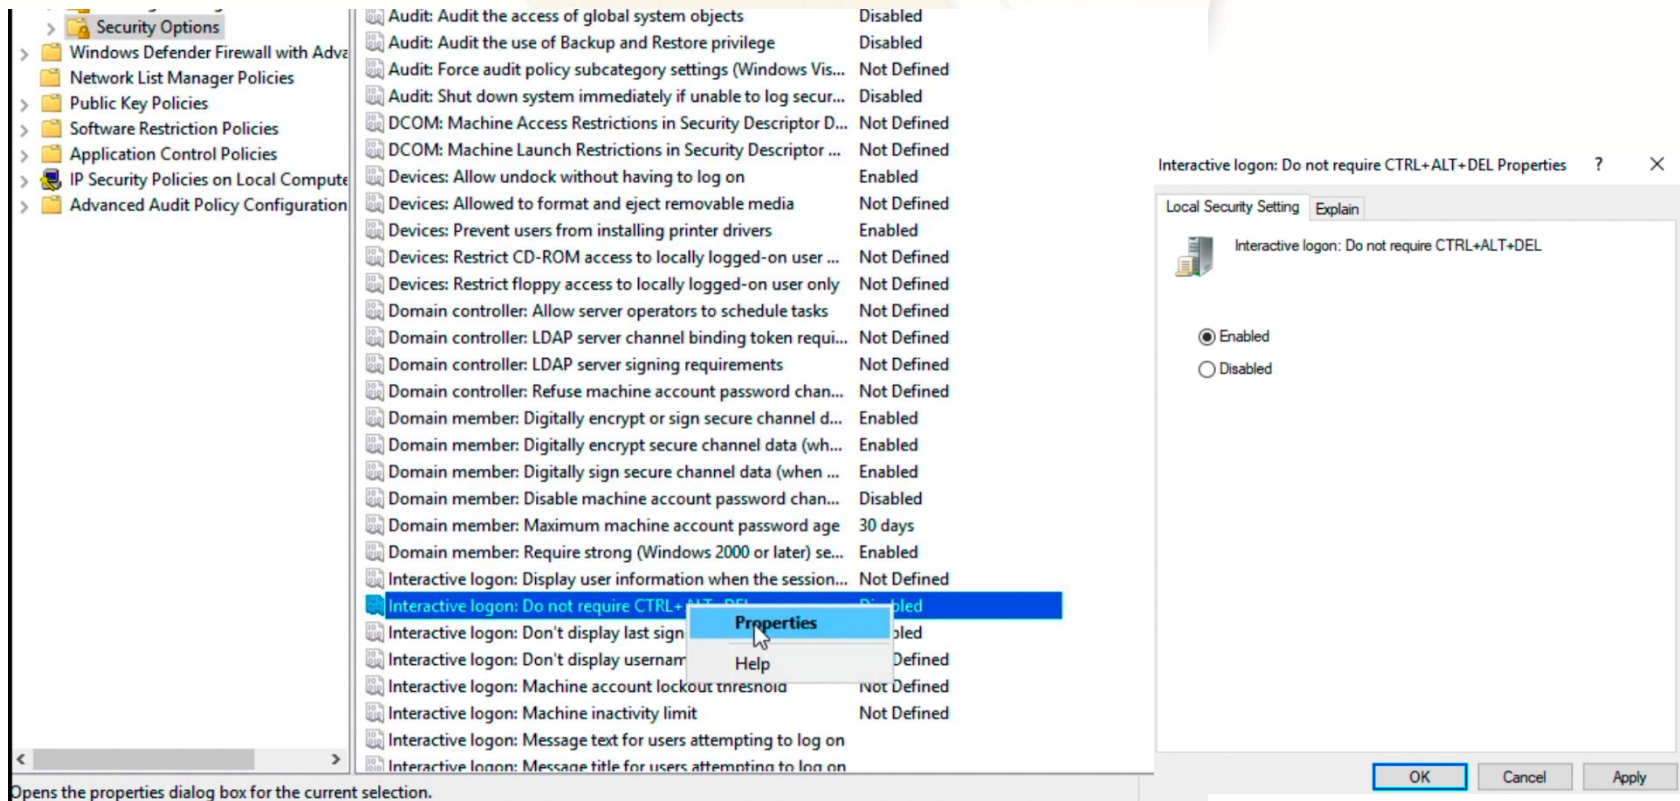

3.2. Do not require CTRL+ALT+DEL (Cont.)

- Step 2: Go to Security Settings > Local Policies > Security Options

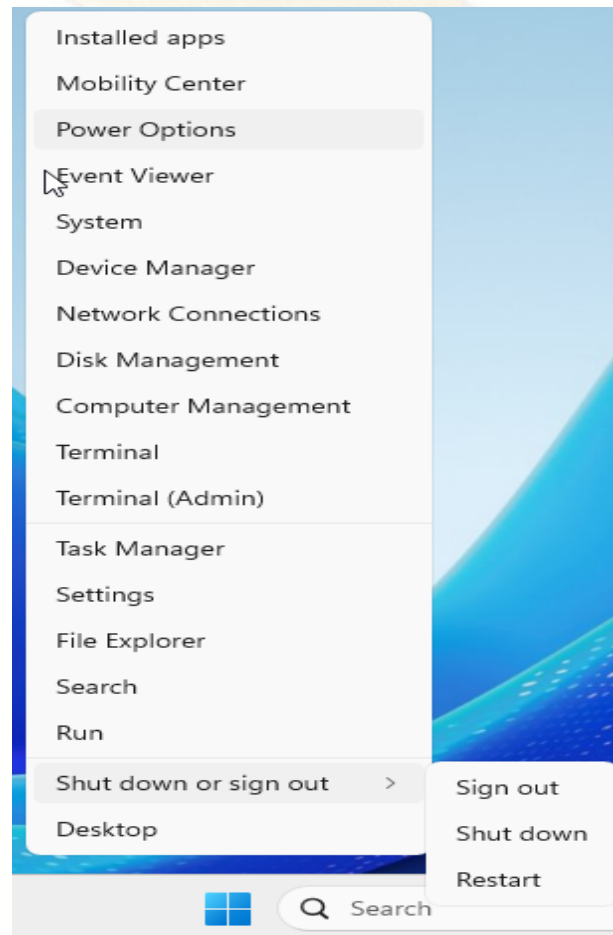

3.2. Do not require CTRL+ALT+DEL (Cont.)

- Step 3: Right click on **interactive logon: Do not require CTRL + ALT + DEL** > Choose **Properties** > Choose **Enabled** > Click **OK**

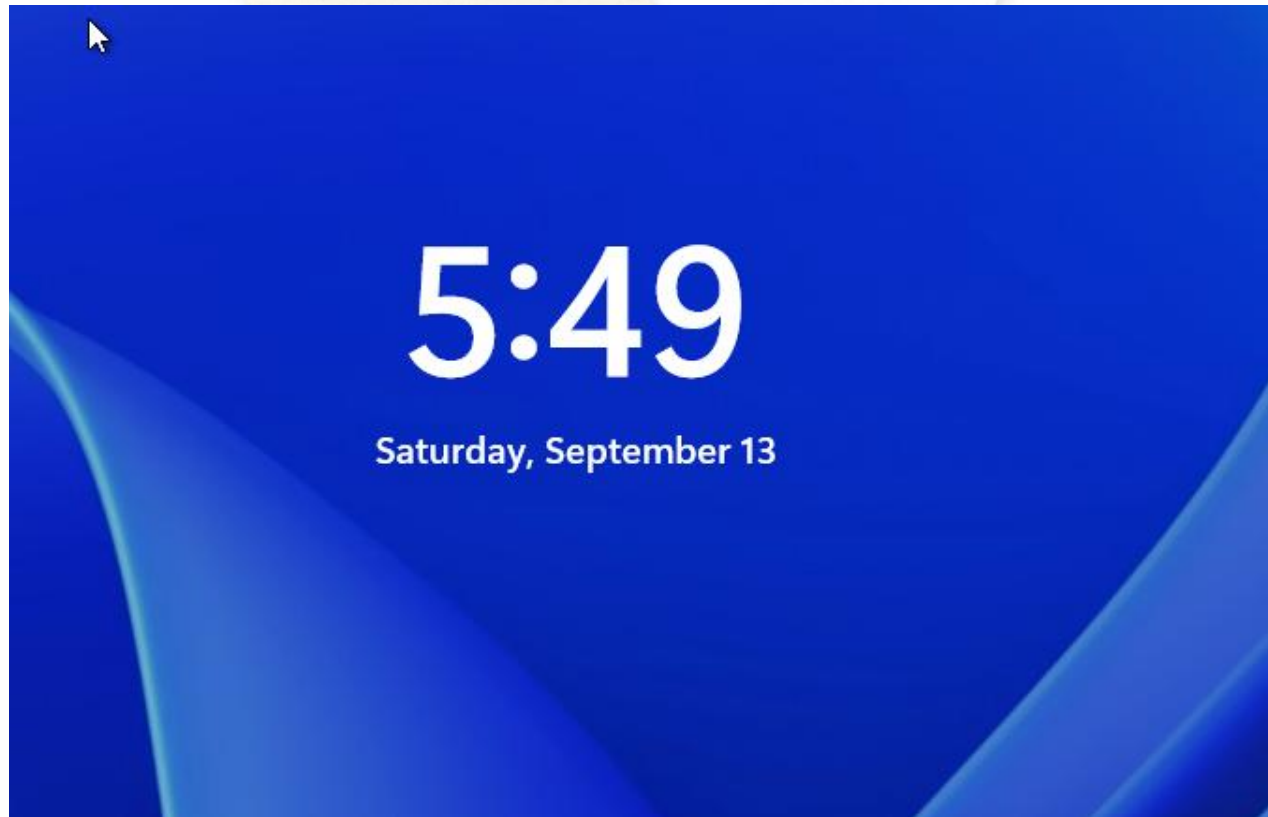

3.2. Do not require CTRL+ALT+DEL (Cont.)

- Step 4: **Restart** your Computer

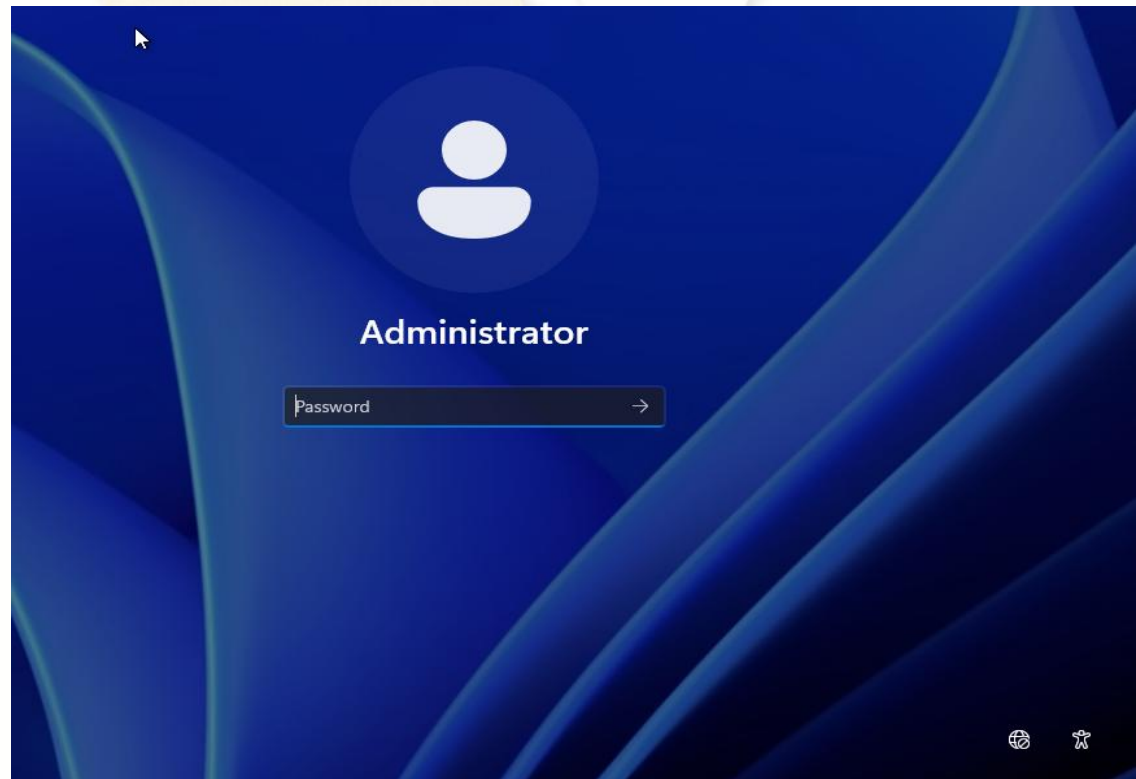

3.2. Do not require CTRL+ALT+DEL (Cont.)

- Step 5: After your Computer restart, you can login without press CTRL + ALT + DEL keys

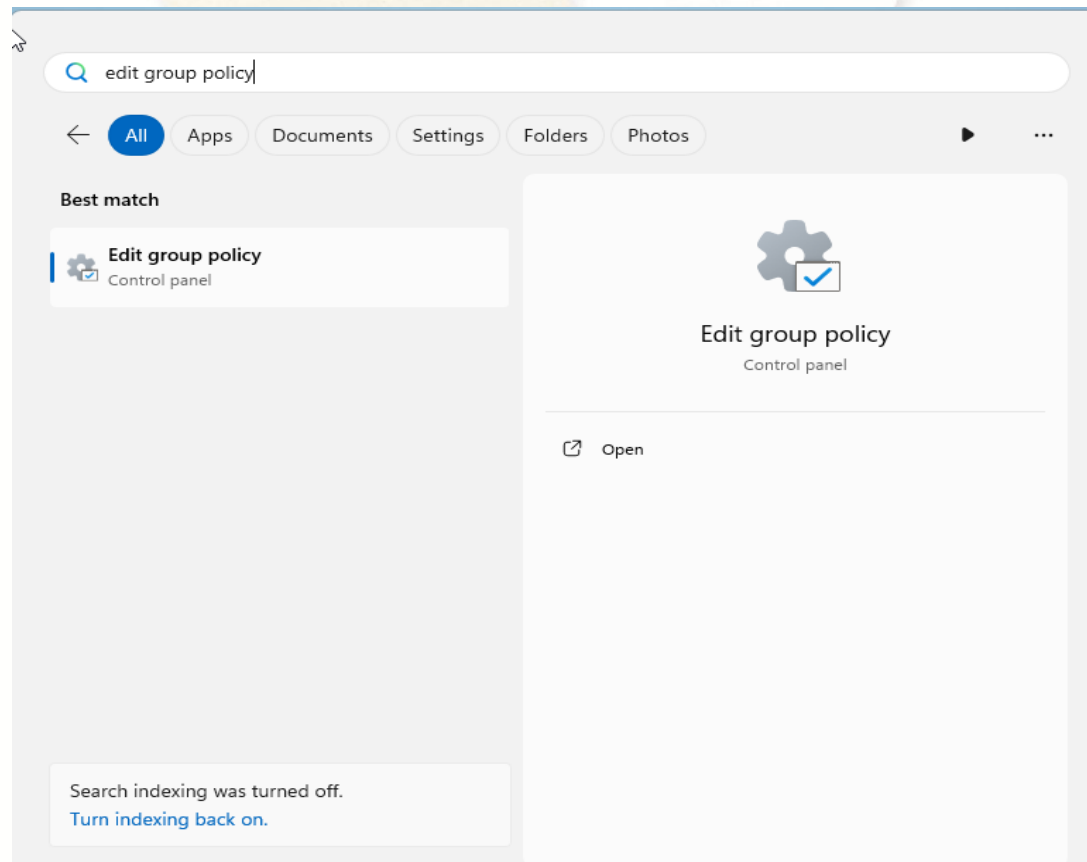

3.3. Shutdown Without Logging In

- By default setting, Windows Server disallows you to **shutdown or restart** this computer without logging in.
- Sometimes, you need to edit a policy to show shutdown button on login screen. This is not recommended for security.

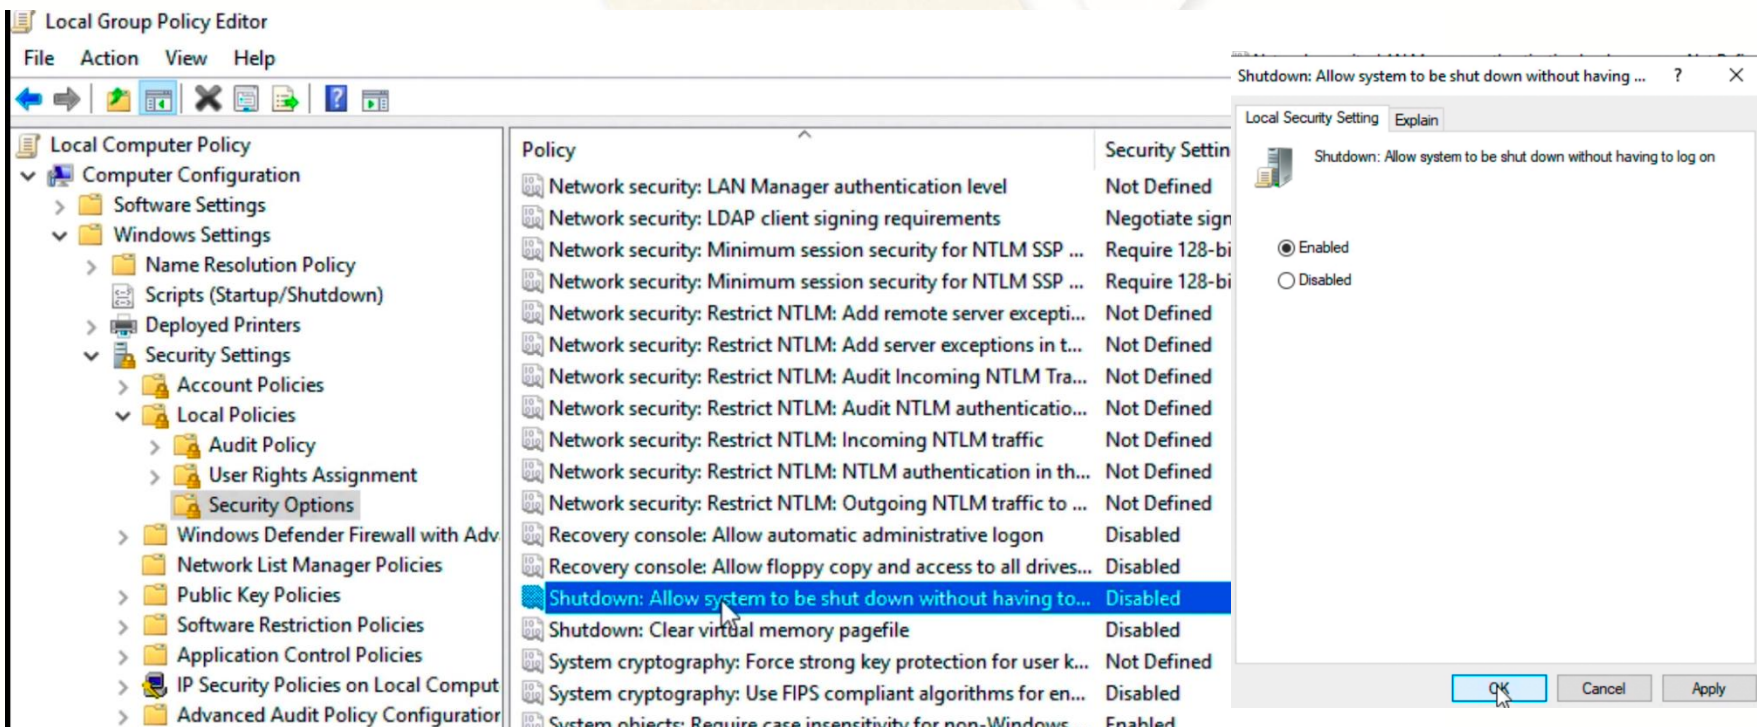

3.3. Shutdown Without Logging In (Cont.)

- Step 1: Click **Start** button > type **Edit group policy** > Click **Edit group policy**

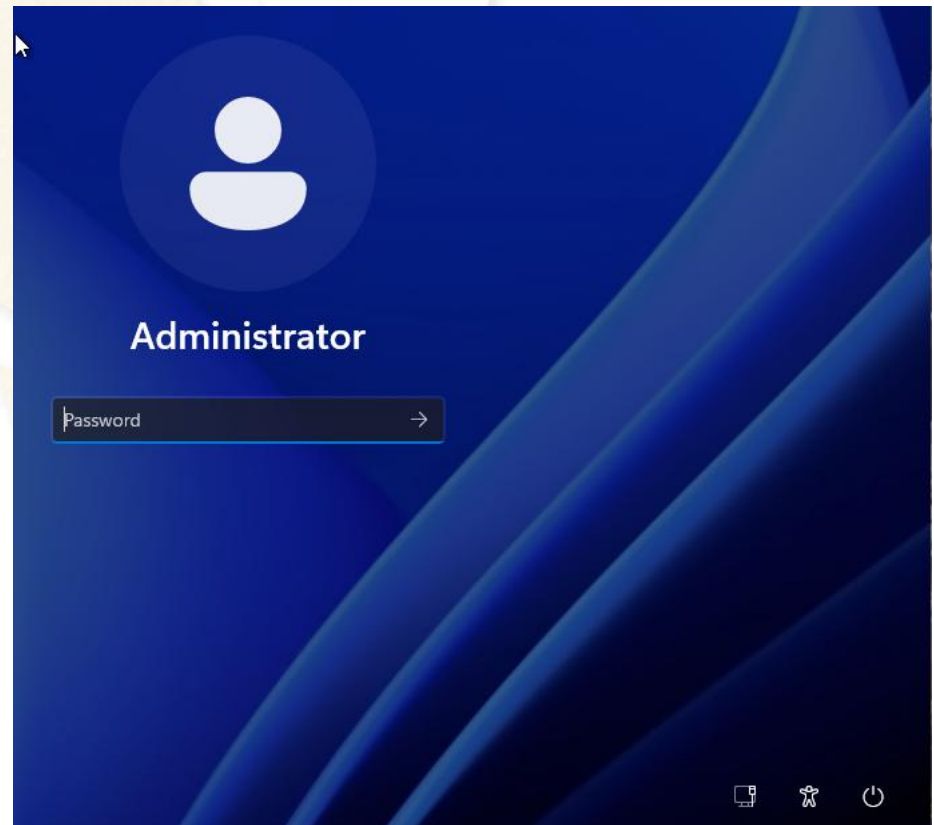

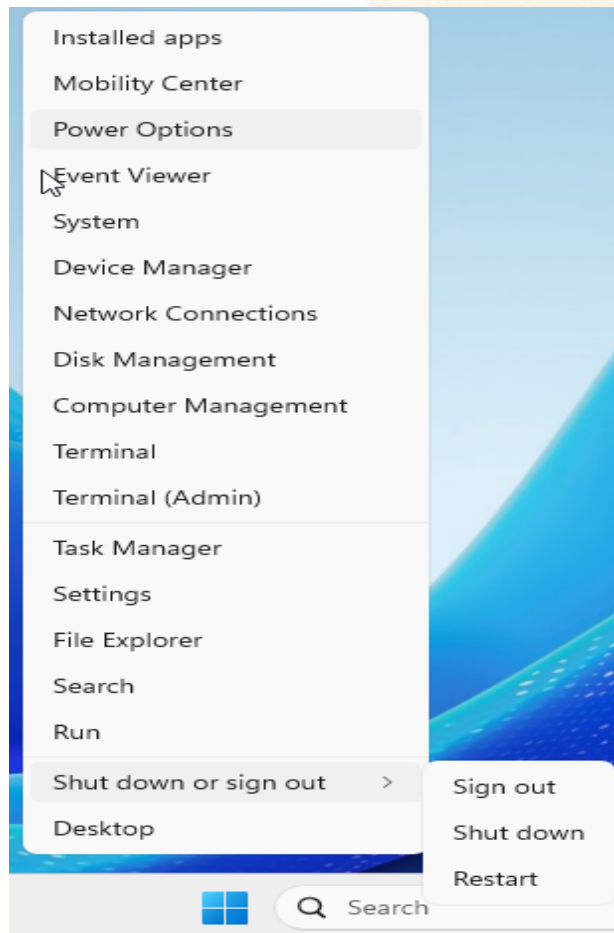

3.3. Shutdown Without Logging In (Cont.)

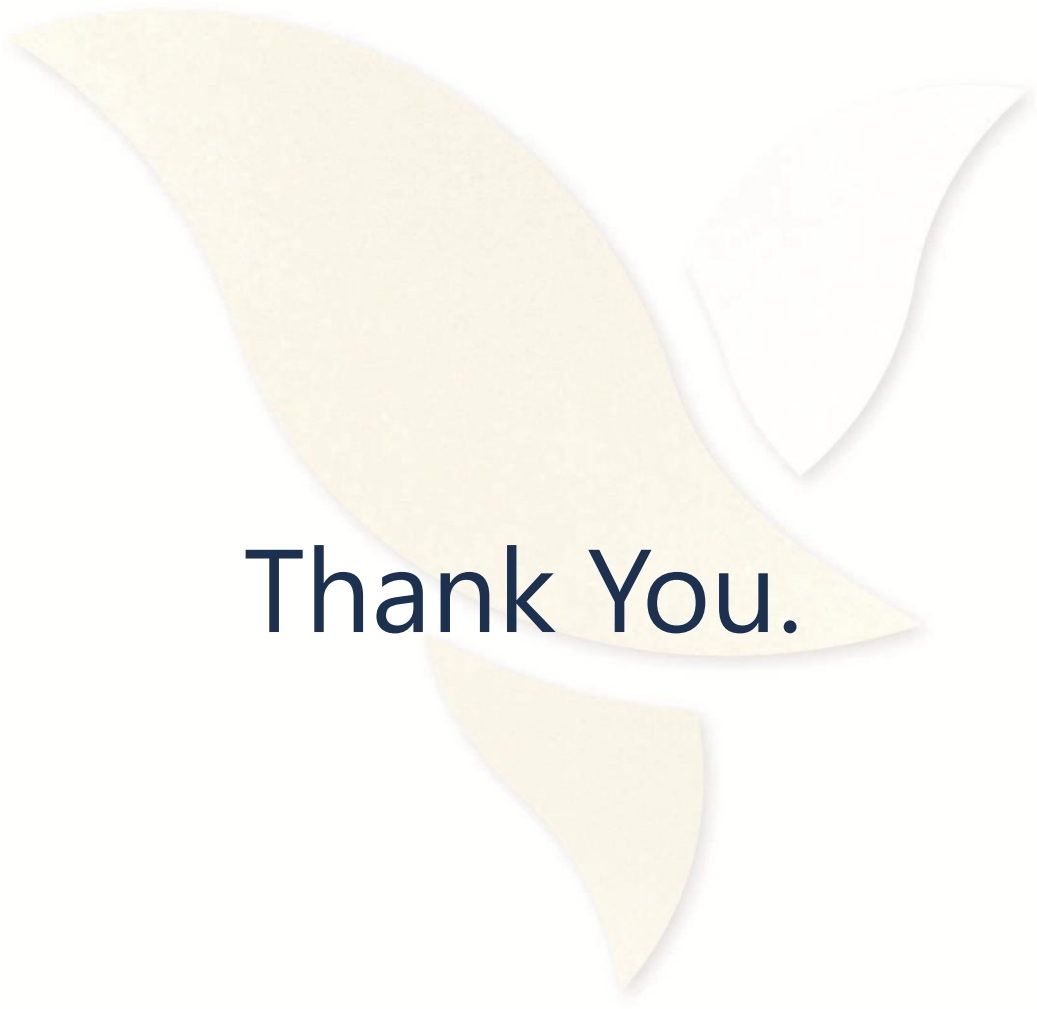

- Step 2: Go to Computer Configuration > Windows Settings > Security Settings > Local Policies > Security Options
- Step 3: Double click **Shutdown: Allow system to be shut down without having to log on** > Choose **Enabled** > Click **OK**

3.3. Shutdown Without Logging In (Cont.)

- Step 4: **Restart** this Computer and you will see a **Shutdown** button on login screen.

A stylized bird logo composed of three overlapping, curved, leaf-like shapes. The largest shape is a light beige color, and the two smaller shapes are white. The bird is facing right.

Thank You.
